National ISDN Basic Rate Interface (BRI) on GTD-5 EAX Switches – BC TEL

Stentor, on behalf of BC TEL, announces the planned introduction of the National ISDN Basic Rate Interface (BRI) to customers served by the Company's GTD-5 EAX switches. The interface is expected to be offered by IQ98.

Compatibility Impact:
Terminals designed to earlier National ISDN specifications will not be rendered incompatible by the introduction of this interface. However, this interface adds new capabilities that may not be supported by such older terminals.

Documentation:
The National ISDN BRI interface for the GTD-5 EAX is defined in AG Communication Systems (AGCS) document, CI-004000-001, ISDN BRI Customer Equipment Interface, Issue 001, March 24, 1997. This document, refers to specific ITU, ANSI-T1, and Bellcore documents for service/feature specifications. Hard copies of the document are available from AGCS for US$100 each. Please note that the price is subject to change without notice.

To obtain the AGCS document, please write or call:

> **AG Communication Systems** Order Fulfillment
> 2500 West Utopia Road
> P.O.Box 52179
