# How Translations by Acclaro works

After a quick setup, you can get started right away.

## 1 Export/import from Contentful

With the Translations by Acclaro's export/import feature, you eliminate copying and pasting from your workflow. Simply select the content type entries you'd like to translate, click export and send the resulting .json files to your linguists.

Contentful's order dashboard will display the file status as In Progress. Once entries are translated, import them back into Contentful and the status will automatically update to Ready for Review.

## 2 Access professional linguists in 125+ languages

In choosing Acclaro as your translation partner, you can send translation requests to vetted, diversified, in-country linguists. From your Contentful dashboard, you'll see translation status and a link to more detailed updates.

## 3 Fully automate your workflows with Acclaro's API

Acclaro clients also have the option to manage translations within Contentful.

If you choose to activate Acclaro's API, you can send orders to linguists, track orders in real time and review translated content without leaving the platform.
