“ *Gathering all the project information on a single platform enables our workers to focus on what’s essential and to spend less time coordinating.* ”

Florent Litzow, CEO, Carpe Domi

## Everyone at Carpe Domi uses Fieldwire

Carpe Domi is a young refurbishment and architecture company based in the Paris area. Founded in 2013 by Florent Litzow, a graduate from Ecole Polytechnique and Ecole des Ponts and former employee of Lafarge, Carpe Domi is mainly involved in interior renovation projects. In order to meet the high demand for its services, the company has chosen Fieldwire for all of its processes across its 25 staff members (including architects, civil engineers, logistics managers, and construction workers). Carpe Domi reached an average of 40% annual growth over each of the past 5 years though a combination of its high quality bar together with the productivity gains offered by Fieldwire.

### Daily task management

Carpe Domi’s teams make use of Fieldwire for all of their activities. The task management system helps clarify what work needs to be done and identifies the person responsible

for carrying it out. Task management is used both for ongoing projects as well as final stage closeout. This closeout phase is substantially simplified thanks to Fieldwire’s punch lists.

Workers get up and running quickly, and become familiar with Fieldwire in just 15 minutes.

Thanks to Fieldwire, the closeout process is 4x faster, down from two months to two weeks.

Everything is shared on Fieldwire, strengthening communication between the design and construction teams.

***“Getting used to the platform is quick and easy. Just 15 minutes is enough for our workers to be operational.”***

Florent Litzow, CEO, Carpe Domi

Practically, the foreman creates the tasks and everyone at the company communicates directly on the platform. Carpe Domi also handles inspection reports in Fieldwire. Across all of its projects, Carpe Domi saw a much faster closeout process, from two months to two weeks on average.

The same goes for repairs and minor deficiency interventions. As soon as a request is received, a task is created and then documented with photos taken on site. Once the tasks are completed, reports are edited and sent directly to the project owner from Fieldwire.

#### **An easy-to-use software**

At Carpe Domi, every employee uses Fieldwire, both in the field and in the office. Thus, everyone has a work smartphone. This choice is completely deliberate for Florent Litzow, CEO of Carpe Domi, and justified by the effectiveness of the initial training.

With Fieldwire, it is possible to train an employee in 15 minutes. With an easy-to-use interface, everyone can get started quickly.

#### **Enhance communication between field and the office**

Centralizing all the information in Fieldwire enables the

construction teams to be always up-to-date. Tasks are assigned in real time and the latest versions of the plans are viewable by everyone. Plan change notifications are sent directly to both the architects and foremen. Thus workers, architects, and foremen all speak the same language and possess the same information at the same time.

This better coordination provided by Fieldwire translates into significant time savings. Long email threads or phone calls are no longer needed to get missing information or the latest plans. Everyone can then focus fully on their operational mission, which increases the general productivity.

Unending travel is another hindrance to productivity. Since they adopted Fieldwire, Carpe Domi’s foremen have substantially reduced their travel and have therefore freed up time to better manage each project as well as focus on client contact. It has also clear benefits for field teams. Whereas previously deficiencies or omissions required them to go back to the jobsite, Fieldwire helps to ensure that every task has been completed without a need for a site visit. This improves the quality of the work and drives higher client satisfaction.

Fieldwire is a construction field management platform which streamlines jobsite coordination, used on over 200,000 projects worldwide. It saves construction professionals an hour a day by powering clear and efficient communication between field and office staff. With its easy-to-use mobile solution, Fieldwire connects the project team – from subcontractors’ foremen to the general contractor’s project manager – enabling real-time information sharing.
