

Norsepower enters the finals of this year's European Marine Engineering Awards

Norsepower has entered the finals of the European Marine Engineering Awards, being a shortlisted candidate for the Fuel Efficiency Award.

Norsepower's CEO Tuomas Riski states: "It was a pleasure to see that the tremendously good test results of the Norsepower Rotor Sail Solution on board Estraden have led to Norsepower being listed as a finalist in the European Marine Engineering Awards. This is an important recognition to our engineers and to our engineering partners."

The European Marine Engineering Awards is hosted and organized by Riviera Maritime Media. A panel of high level industry experts across the maritime sphere have selected the short-listers based on the set criteria for each award category. The judges for this year are: John Carlton, City University London; Päivi Haikkola, Deltamarin; Robert Ashdown, International Association of Classification Societies; Paul Gunton, Riviera Maritime Media; Kjeld Dittmann, SEA Europe and Anna Larson, Wallenius Wilhelmsen Logistics.

The public voting for the award takes place at <http://www.marinepropulsionconference.com/awards/fuel-efficiency-award> until Friday 11 March.

About Norsepower

Norsepower Oy Ltd is a leading Finnish marine engineering company specializing in clean tech solutions within the marine sector. Norsepower's vision is to become the global market leader in cargo vessel auxiliary wind propulsion systems.
