

## **Questions you might want to ask your GP if you are worried about prostate cancer**

You can print this page and write down the answers during your appointment. You can decide which questions you need to ask.

Do I need to see a specialist, is it urgent?
When will I see them?
Will I find out about my appointments by post or telephone?
Do I need tests? What will they involve?
How long should I expect to wait?
Where can I find out more about tests?
Do I have to do anything in particular to prepare for the tests?
When will I get the results and who will tell me?

## If they don't think you need any tests or a referral

Can you explain to me why I don't need to have tests or see a specialist?

Is there anything I can do to help myself?

Do I need to see you again?

Who do I contact if my symptoms continue or get worse, particularly if it's during the night or at weekends?

I have researched into prostate cancer and wish to have a PSA test – can you explain why I don't need one?
