## At least 24 billion credentials are available on the deep & dark web

How can organizations protect themselves?

Introducing TeamT5 Deep & Dark Web Risk

TeamT5 scans both surface web and the deep & dark web to see if your sensitive data is being sold online. Our monitoring of Chinese cybercrime, which is overseen by dedicated analysts, includes:

- More than 1.5 billion leaked credential records
- More than 30 million compromised devices
- Over 40 deep and dark web sites (incl. Chinese-speaking underground communities
- Over 400 telegram channels
- Social media and forums used by Chinese-speaking threat actors

Surface Level
4% of the web

Deep Web
90% of the web

Dark Web
6% of the web

Package	Description
Deep and Dark Web Risk Alert	• Weekly automated scans • Results for the week will be automatically updated on the ThreatVision platform • Automatic email notifications • Leaked data exportable in CSV format
Deep and Dark Web Risk Tailored Report	• Report contains recent findings, threat risk analysis and mitigation suggestions • Coverage includes deep and dark websites, threat trends from hacker forums, Chinese speaking underground communities, social media sites, and popular forums in the APAC region

All in one place!

Any leaked data we find for you is displayed right on your ThreatVision dashboard, and is easily exportable to CSV!
