Document	Description
CFE Administration Guide	Guide for administrators who are installing, setting up or changing system settings on the CFE.

1 Overview – Makes Telephone System Tasks Repeatable

The CFE simplifies a number of configuration tasks on the Cisco telephone system, allowing people who are less familiar with the telephone system to safely make configuration changes that are easily repeated.

Streamline your operations and costs

The CFE allows organisations to streamline their operations for performing service request moves, adds and changes of telephones, by freeing up time for skilled resources. Only pre-defined changes can be made, reducing the likelihood and impact of configuration changes made in error.

Separate areas for configuring users and telephones, or the CFE itself

The CFE is split into two areas; one for making changes to telephones or users, and one for setting up the CFE. An administrator can be set up as either a phone administrator, or a CFE administrator, or both.

- **Phone administrators** set up users and telephones.
- **CFE administrators** set up the CFE to match the CUCM environment. These items are generally set up once, with additions as telephone solution is adapted over time.

Set up your CFE to match your systems and processes

Configuration options allow you to set defaults for a number of automated items, and set the CFE to match your systems. This can be done when the CFE is first installed, and also as your telephone system evolves, such as when new sites are added. This guide explains the items that can be changed by the CFE administrator.

Your CFE may not have all the features shown in this guide

Some features in your CFE are determined at installation time and by the license option purchased. Some items in this guide may not appear in your solution. Specific settings are:

- Bulk add user settings
- Bulk delete user devices / device profiles
- Device only CSS (where the Calling Search Space for the device include class of service dialling restrictions – legacy method for configuring CUCM)
- CAPSL – Cisco Automated Provisioning Systems for LDAP, which configures phones for users with minimal intervention by administration staff

2 Getting Started – same login for Phone and CFE administrators

2.1 Log on from a web browser

1. Enter the **URL** or address for the CFE application. The usual format for the url is:

http://[server IP address]:8080/apex/f?p=cfe

User Name

Password

2. Enter your **user name and password**. This is usually the same as your LAN login. If you do not regularly have a LAN login, then an alternative login account may be provided.

2.2 Getting around – navigation tabs and breadcrumbs

The screenshot shows the Atea Systems web interface. At the top left is the logo and the text "Contained Front End for Ateasystems Ltd". A "Menu tabs" section contains various options like "Reports", "Modify User", "New Phone", etc. A "Logged in user" section at the top right shows "Welcome: ATEA_CFE_ADMIN" and "Logout". Below the menu is a breadcrumb trail: "DirectoryUser > Edit Directory User". The main content area is titled "Edit Directory User" and contains a form with fields for "UserID", "First Name", "Middle Name", "Last Name", "Telephone Number", "Mail ID", and "Department". There are also "Action buttons" like "< Previous" and "Apply". Annotations with arrows point to these elements, explaining their function: "Menu tabs To choose a section", "Logged in user", "Breadcrumbs Visual trail", "Handy information Expands out to help explain the screen", "Action buttons", "Essential items Marked items must be completed", and "Navigation tabs Based on your permissions".

Menu tabs

Displays the options available for the selected module. You may see more or less menu tabs based on your access permissions and how your CFE is configured.

Bread crumbs

These indicate where you are and allow you to go back to a previous screen by clicking on a preceding item.

Navigation tabs

These show the CFE modules available to you. Your permissions may allow you to see just a single tab. The red tab is the one currently selected.

Navigation bar - User name and logout

Shows who is logged in, and allows you to logout of the CFE.

Essential items are marked with a red asterisk

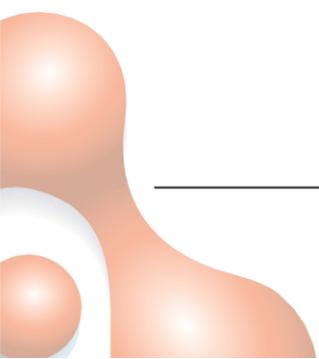

Any item marked with a red asterisk must be completed before going to the next screen.

Action buttons determine the next step

Use the action buttons to move to the next step. Sometimes there is an action button next to a field. This is usually specific to that individual field, such as checking whether the entry is valid.

Help text for handy information

Expand this section to see the on screen help.

3 Configuring users and phones

In the CFE, a User is an entry in the CUCM directory. This directory user is normally (but not always) a person and can be searched for and dialled from other phones. Examples of users are 'John Smith' or 'ANZAC Meeting Room'. A user can either just be a directory entry or can have a device associated to them like a phone or a User Device Profile (UDP).

A phone on the other hand, is just the handset that sits on a desk from which calls can be made. There is no associated entry in the directory that people can search for to find the number for this phone. Phones are generally referred to as a 'logged out device' when a company uses Extension Mobility (EM) or if not using EM perhaps it is just a phone in a waiting room.

To set up a user, the steps are:

1. Create the user entry (via AD or CFE depending on your system)
2. Add an IP Tel device (phone, device profile or softphone)
3. Assign the site and profile
4. Assign a phone device and telephone number
5. Add options: User Device Profile (UDP), softphone

To set up a phone, the steps are:

1. Assign the site and profile
2. Assign a phone device and a telephone number

3.1 Add a user into the CUCM directory – via AD or via CFE

There are two ways to add a User into the directory. One is via a directory that CUCM is synchronised with, such as Active Directory (AD) or other LDAP source. The other method is directly through CFE.

Create users through AD/LDAP

Where Active Directory is being used, create all new users in AD first. Once the CUCM has synchronised with AD, the user will also be created within the CUCM, but without a telephone. Or in the case of an Extension Mobility (EM) user, they will be without a device profile. LDAP synchronisation for the CUCM is usually set to an interval between 6-24 hours (Cisco has restricted the minimum interval to six hours). You may create several of these staggered during the day (up to 20 on release 10.5).

Create users through CFE

Where Active Directory is not being used, users can be added into the CUCM directory straight from CFE using the Directory Users page.

3.1.1 Add a new user – AD not used

This only applies if you are not using Active Directory (AD). Users can be added into the CUCM Directory straight from CFE using the **Modify Users** page.

On the **Modify User** page:

1. Enter the details in the section **Create New Directory User**

The screenshot shows the 'Modify User' page with the following elements:

- Navigation tabs: Reports, **Modify User**, New Phone, Modify Phone, User Guide.
- Section: Information
- Section: Find Directory Users
 - Find: UserID (dropdown), [text input], Go (button)
- Section: Create New Directory User
 - Insert (button)
 - * UserID: duser4 (with left arrow)
 - * First Name: Demo (with left arrow)
 - Middle Name: [text input]
 - * Last Name: User4 (with left arrow)
 - Telephone Number: [text input]
 - Mail ID: [text input]
 - Department: [text input]
 - Upward arrow pointing to the Insert button
- Section: Search Result
 - no data found

This section only appears if the CUCM does *not* have LDAP synchronisation to AD. The items marked * are mandatory.

2. Click **Insert**

3.1.2 Add a new user – using AD

Add the new user into AD. The user details will appear in the CFE after both the AD and the CUCM have synchronised.

3.2 Search for a user

On the **Modify User** page, use the section under **Find Directory Users**.

1. Under **"Find"**, choose the search option from UserID, last name, first name or extension number.
2. Enter your search criteria (or leave blank) and click **"Go"**
3. Select the user from the list, click **Edit**.

3.3 Add an IP Tel device to a User

Once a user is in the CUCM directory, add IP Tel devices to them such as a phone or a UDP.

1. On the **Modify User** page, use **Find Directory Users** (see 3.2 Search for a user) to search for the user, then click the **Edit** link
2. Click on **Add 1st Device**.

7. Under **Device** (physical phones only – ignore if UDP):
 - Enter the **MAC address** of the telephone device to be assigned to the user.
 - Click **Validate** to check that this device is indeed available. If the phone is currently assigned to someone else, you'll need to remove that phone from their profile first (see modify user). If the phone is currently set up as a normal phone, you'll need to delete the phone first (see modify phone).

8. Under **Line1**, either:
 - Click **Find Extension** to automatically retrieve a spare number for the site. This also reserves it for 30 minutes to avoid another CFE user from allocating; OR

- Enter the **extension number** that you wish to assign to the user. This may sometimes be different to the phone number that appears in the directory, and is assigned within AD; AND
- Click **Validate** to check the number you entered is unused, and belongs to the correct site. A warning may pop-up, but still allows you to use this number.

3.3.4 Optional - assign a UDP device and a phone number (New user configure)

This is the same as assigning a phone device but does not require a MAC address. See 3.3.2 Choose the phone template (profile).

3.3.5 Optional - assign a Softphone device and a phone number (New user configure)

This is the same as assigning a phone device. See 3.3.2 Choose the phone template (profile).

3.3.6 Save the settings for the new user

9. When you are done, click an action button:
 - **Previous** takes you back to the previous screen without saving the settings.
 - **Apply** saves the settings, and takes you to the confirmation screen.

10. Click **Modify User** should you wish to make further changes to the user settings, including their line or PIN resets.

Note: If your CUCM is synchronised to AD, the CFE can be configured to write back the extension number back to AD. The next time CUCM synchronises with AD it will retrieve the extension number and put the number in its directory. If your CUCM is not synchronised with AD, then the CFE can be configured to write the extension number straight to the CUCM directory.

3.4 Change a user's directory details

User directory details can be updated here provided the user was added to the CUCM directory using the CFE. Examples include first and last name, the alerting name and directory number. This will update the CUCM and CUC. Note that this is currently only supported when CUCM is NOT synchronised to AD.

If you want to give this directory user a phone number that is different to their IP Tel number, you can do this here. An example of this would be a sales person's mobile number. (Note there is a CFE setting that will prevent an alternative number to be added if they user has an IP Tel device. If you are not sure what applies to you, please contact Atea support).

1. On the **Modify User** page, use **Find Directory Users** (see 3.2 Search for a user) to search for the user, then click the **Edit** link

Devices

- **Add CIPC** – to add an IP communicator
- **Add Phone** – to add a phone device
- **Device name link** – to edit the settings for existing devices linked to the user.

Devices that start with "SEP" are physical telephones. An extension mobility profile is often indicated with "EM". Selecting an item takes you to the Modify Device screen. Alternatively, you can add another device should the user need it.

3.5.1 Change device settings

Use this page to update device settings like button templates, line details and speed dials.

1. Select the **device** link to the device by from Modify User profile page

The screenshot shows the 'Modify User' page with a navigation bar at the top containing 'Reports', 'Modify User', 'New Phone', 'Modify Phone', and 'User Guide'. Below the navigation bar is a breadcrumb trail: 'DirectoryUser > Edit Directory User > Modify User'. The main content area is titled 'Information' and contains three sections: 'User', 'Voicemail', and 'Devices'. The 'User' section has fields for 'UserID' (duser3), 'First Name' (Demo), 'Last Name' (User3), 'Telephone Number' (91205), and 'Department'. The 'Voicemail' section has a 'Status' field (voicemail box found) and a 'Delete Mailbox' button. The 'Devices' section has 'Add CIPC' and 'Add Phone' buttons and a table with the following data:

DEVICE	DESCRIPTION	MODEL
UDP duser3	Demo User3	Cisco 7965

A red arrow points to the 'device' link in the table. The page number '1 - 1' is displayed at the bottom of the 'Devices' section.

6	Speed Dial	4 Helpdesk	777	

1 - 6

2. On this page you may change these device settings:
 - **Device Name** – name of the device. Clicking the **Change Name** button will open a new screen – see 3.5.2 Change Device Name (Modify User Device Profile / IP Phone)
 - **Device Description** – edit the existing text
 - **Model** – this is the model of phone and you cannot change it. You can however delete this phone and add the correct one.
 - **Button Template** – select an item from the dropdown list. The phone button template defines which buttons on the side of the phone display are for lines, and which are available for speed dials.
 - **Softkey Template** – select an option from the dropdown list. Otherwise leave it blank to use the system default template.
 - **Expansion Module 1 or 2** – select an option from the dropdown list

3. To edit the phone buttons:

- The **Edit Speed Dial BLF** button takes you to the page to update the Speed Dial Busy Lamp Field settings - see 3.5.4 Edit BLF's speed dials (Modify User Device Profile / IP Phone)
 - The **Edit Speed Dials** button takes you to the page to update the normal Speed Dials – see 3.5.2 Change Device Name (Modify User Device Profile / IP Phone).
 - Click **Edit** next to a line to change the line settings – see 3.5.5 Modify or delete the line – basic settings (Modify Line) and 3.5.6 Modify or delete the line – advanced including Call Forward settings
 - Click **Create** next to a button to create a new line – see 3.5.7 Add a new line – (Modify User Device Profile / IP Phone)
4. When you are done, click an action button:
- **Previous** takes you back to the previous screen without saving the settings.
 - **Delete** will delete the device and take you back to the modify user page.
 - **Save** keeps and applies the settings.

3.5.2 Change Device Name (Modify User Device Profile / IP Phone)

On the Modify device screen:

1. Click the **Change Name** button

2. Enter the **new name** details and click **Apply** (or **Previous** to return to the previous screen without making any changes).

3.5.3 Edit speed dials (Modify User Device Profile / IP Phone)

On the Modify user device profile / IP Phone screen:

1. Click **Edit** against the line to make changes to the line settings.
2. Common settings are on the **Basic** screen. Advanced settings include call forwarding.

3. Edit the settings. You may change any of the shaded items and items with dropdown boxes. The extension number is mandatory. To change the extension number, delete this line and create a new one.
 - **Label on phone** is the text that displays on the phone screen
 - **Class of Service** is to set calling permissions e.g. make international calls. (Note: This field may be hidden if the CFE is configured for a CUCM that uses the “device only” calling search spaces.)
 - **Caller ID** settings are based on the default for the user’s phone profile, but you can change the details for this user here.
 - **Ring Setting** is the system default, disable, flash once, ring once or ring.
 - **Call Waiting** set this to “1” to disable call waiting. Higher values will allow additional calls to “wait” on the line.
 - Set the **Call Pickup Group** to the desired group name. Set this to “%” where call pickup is not set. Alternatively, enter a phone extension to copy the call pickup group setting from and select **Find**.
 - The **Voicemail Profile Name** specifies whether the user has the default voicemail profile or no voicemail. This setting determines whether the voicemail button is active on the phone. The voicemail system must be configured separately.

4. When you are done, click an action button:
 - **Back to Device** takes you back to the previous screen without saving the settings.
 - **Delete** removes the line from the device.
 - **Apply Changes** saves the settings, and sends them to the CUCM.

3.5.6 Modify or delete the line – advanced including Call Forward settings
 This screen includes the fields from the basic screen. Use the advanced screen to make detailed changes, and changes to call forward settings. To activate the advanced screen, select **Advanced** and press **Go**.

Dialed Number

1. Edit the settings. The **extension number** is mandatory. To change the extension number, delete this line and create a new one.
The settings listed here match those on the CUCM line settings.
2. The **Call Forward** settings:
 - Set **Voicemail** to yes to forward the call to voice mail
 - The **destination** is the alternative number when not forwarding to voicemail
 - **CSS** is the calling-search-space class-of-service to apply upon forwarding the call.
3. The **Caller ID settings** allow you to change the default settings.
4. When you are done, click an action button:
 - **Back to Device** takes you back to the previous screen without saving the settings.
 - **Delete** removes the line from the device.
 - **Apply Changes** saves the settings, and sends them to the CUCM.

3.5.7 Add a new line – (Modify User Device Profile / IP Phone)

A new line can be added provided there is a spare line in the phone button template selected.

On the Modify IP Phone screen:

The screenshot shows the 'Modify User Device Profile' screen. At the top, there is a navigation bar with tabs: Reports, Modify User, New Phone, Modify Phone, Bulk Add Users, Bulk Delete Users, UCM Phones, AAES, MailBoxes, and User Guide. Below this is a breadcrumb trail: DirectoryUser > Edit Directory User > Modify User > Modify User Device Profile.

The main content area is divided into two sections: 'Information' and 'Buttons'.

Information Section:

- Device Name: UDP_duser4 (with a 'Change Name' button)
- Device Description: Demo User4-21002
- Model: Cisco 7975
- Button Template: Standard 7975 SCCP (dropdown)
- Softkey Template: <none> (dropdown)
- Expansion Module 1: -none- (dropdown)
- Expansion Module 2: -none- (dropdown)

Buttons Section:

Buttons: Edit Speed Dial BLF, Edit Speed Dials

Button	Type	Label	Number	Action
1	Line	1 Demo User4 - 21002	21002	Edit
2	Line	2		Create
3	Speed Dial	1		

A red arrow points to the 'Create' button in the second row of the table.

1. Select **Create** next to the spare line to open the new line page.

Display Name

Alerting Name this will not be applied if it's a shared line

2. Either:
 - Enter the **extension** number for the new line and click **Validate** to check whether the number is suitable. If you enter a shared line, it will show up as being already in use, however you may choose to use it anyhow; OR
 - Alternatively, select the **site**, and click **Find Extension** to automatically get the next free number.

3. Enter the other line details
 - **Line Index** indicates which button on the phone the line appears at. This cannot be changed.
 - **Class of service** defines dialling permissions (e.g. allows international calls). (Note: This field may be hidden if the CFE is configured for a CUCM that uses the “device only” calling search spaces.)
 - **Line Label** appears on the screen on the phone next to the line button
 - **Display Name** will appear as the caller ID for internal calls
 - **Alerting Name** internal caller ID during ringing. This does not apply to shared lines.

4. When you are done, click an action button:
 - **Cancel** takes you back to the previous screen without saving the settings.
 - **Insert** saves the settings, and sends them to the CUCM.

3.6 Create User voice mailbox

A mailbox can be created for the user where the CFE is connected to the Cisco Unity unified communications system. Usually, the mailbox is part of the site profile.

To add a mailbox manually:

1. Search for the user, and click **Edit**

Reports Modify User New Phone Modify Phone User Guide

3. Select the **site**, and click **Create Mailbox**.

The screenshot shows the 'Modify User' page with a navigation bar at the top containing 'Reports', 'Modify User', 'New Phone', 'Modify Phone', and 'User Guide'. Below the navigation bar, a breadcrumb trail shows 'DirectoryUser' > 'Edit Directory User' > 'Modify User'. A green notification box at the top center says 'Created Mailbox' with a close button (X).

The main content area is titled 'Information' and is divided into three sections:

- User:** Contains fields for 'UserID' (duser4), 'First Name' (Demo), 'Last Name' (User4), 'Telephone Number' (91203), and 'Department'. Navigation buttons include '< Previous', 'Delete', 'Reset PIN', and 'Reset Password'.
- Voicemail:** Contains a 'Reset voicemail PIN' button and a 'Status' field showing 'voicemail box found' with a 'Delete Mailbox' button.
- Devices:** Contains 'Add CIPC' and 'Add Phone' buttons. Below is a table of devices:

- Click **Delete** to remove the device. This deletes the device but not the user. It takes you back to the **Modify User** screen, where you may add a different device, or delete the user.

Devices that start with “SEP” are physical telephones. An extension mobility profile is often indicated with “UDP”.

3.8 Delete a user from the CUCM directory

Use this module if your CUCM is not synchronised with AD and you want to remove a user completely from the CUCM directory. **Remember to remove their IP Tel Devices first.**

- On the **Modify User** page, use **Find Directory Users** (see 3.2 Search for a user) to search for the user, then click the **Edit** link

The screenshot shows the 'Modify User' page with a navigation bar containing 'Reports', 'Modify User', 'New Phone', 'Modify Phone', and 'User Guide'. Below the navigation bar is an 'Information' section with a 'Find Directory Users' button. A search form contains a dropdown menu set to 'UserID', a text input field with 'duser', and a 'Go' button. Below this is a 'Create New Directory User' section with an 'Insert' button and several input fields: * UserID, * First Name, Middle Name, * Last Name, Telephone Number, Mail ID, and Department. At the bottom is a 'Search Result' section containing a table with columns 'UserID', 'First Name', 'Last Name', 'Extension', and 'Edit'. The table lists five users: duser1, duser2, duser20, duser3, and duser5. A red arrow points to the 'Edit' link for duser3.

UserID	First Name	Last Name	Extension	Edit

3.9 New phone – setting up a phone not associated to a user

Use this module to set up a phone based on a profile, including the phone number and location. You can set up any auto-registered phone connected to the network or create a phone configuration from scratch.

Phones set up using this module are independent of users in the CUCM.

3.9.1 New phone – select site and choose profile

Go to the new Phone screen:

Reports Modify User **New Phone** Modify Phone User Guide

Phones > **New Phone**

New Phone

Next >

Site ←

Template ←

1. Select a **Site** from the range available in the dropdown box
2. Select a profile from the **Template** dropdown. The template defines the number of lines for the device and other standard settings.
3. Click **Next** to assign a phone and phone number on the **Configure New Phone** screen.

3.9.2 New phone – Assign phone device and phone number

The site and phone profile are displayed. Shaded fields can be edited.

On the Configure New Phone screen:

The screenshot shows the 'Configure New Phone' interface. At the top, there are breadcrumb navigation links: 'Phones > New Phone > Configure New Phone'. Below this is an 'Information' section with a 'New Phone Configuration' header. In the top right corner of this section are '< Previous' and 'Apply' buttons. The configuration fields are as follows:

- Site:** Wellington
- Profile:** MeetingRoom7945
- Device:**
 - or MAC Address: abc123456789 (with a 'Validate' button and an upward arrow)
 - Message: (empty)
 - Description: Logged Out 91203 (shaded field)
 - Device Model: IPPhone - Cisco 7945
 - Extension Mobility Enabled:
 - JTapi association: (empty)
- Line1:**
 - * Line 1 Extension: 91203 (shaded field, with 'Validate' and 'Find Extension' buttons and upward arrows)
 - Message: (empty)
 - DDI Mask: 4636XXXX
 - Class Of Service (Line CSS): CSS_L0
 - Call Forward All CSS: CSS_L2
 - Display Name: Logged Out 91203 (shaded field)
 - Alerting Name: Logged Out 91203 (shaded field)
 - Line Label: Logged Out 91203 (shaded field)
 - Voicemail Profile: Default

4. Under **Device**:
 - Enter the **MAC address** of the telephone device to be assigned to the user.
 - Click **Validate** to check that this device is indeed available. If auto registration is enabled then only auto-registered phones can be assigned, to avoid accidentally configuring a working telephone. If the phone is currently assigned to a user, you'll

need to remove that phone from their profile first (see modify user). If the phone is currently set up as a normal phone, you'll need to delete the phone first (see modify phone).

- JTapi association is for advanced phone configuration, such as call centre agents.
5. Under **Line1**, either:
- Click **Find Extension** to automatically retrieve a spare number for the site. This also reserves it for 30 minutes to avoid another CFE user from allocating it; OR
 - Enter the **extension number** that you wish to assign to the user. This may sometimes be different to the phone number that appears in the directory, and is assigned within AD; AND
 - Click **Validate** to check the number you entered is unused, and belongs to the correct site. A warning may pop-up, but still allows you to use this number.
 - **DDI Mask** is used to create the DDI number from the extension number (overlapping digits are marked by an "X") which is presented externally as the caller ID
 - **Class of Service** is the dialling permission set by the profile. (Note: This field may be hidden if the CFE is configured for a CUCM that uses the "device only" calling search spaces.)
 - **Display Name** will appear as the caller ID for internal calls
 - **Alerting Name** internal caller ID during ringing
 - **Voicemail Profile** indicates whether voicemail is set by the profile
6. When you are done, click an action button:
- **Previous** takes you back to the previous screen without saving the settings.
 - **Apply** saves the settings, sends them to the CUCM, and takes you to the confirmation screen.

3.10 Modify phone – change or delete an existing phone

Use this module to find an existing phone, make changes and delete lines or the device.

3.10.1 Find an existing phone

Go to the Modify Phone screen:

Reports Modify User New Phone **Modify Phone** User Guide

Phones > Modify Phone - Search

Search Phone

Where **Extension equals** 91205 **Find**

Description contains
MAC Address contains

Devices

Devicename	Description	Modelname	Devicetype	Extension	Linenumber	
UDP_duser3	Demo User3	Cisco 7965	EMProfile	91205	Line1	Edit

1 - 1

1. Select either the **extension number**, **description** or **MAC address** search option. Enter your search criteria and click **Find**.
2. From the resulting list, select **Edit** for the device or extension mobility profile to be modified.

3.10.2 Modify or delete the telephone device (Modify IP Phone)

On the **Phone > Modify Phone – Search > Modify IP Phone** screen:

Reports Modify User New Phone **Modify Phone** User Guide

Phone > Modify Phone - Search > **Modify User Device Profile**

> Information

Device

< Previous Delete Save

Device Name: UDP_duser3 **Change Name**

Device Description: Demo User3

Model: Cisco 7965

Button Template: Standard 7965 SCCP

Softkey Template: Standard User

Expansion Module 1: -none-

Expansion Module 2: -none-

Buttons

Edit Speed Dial BLF **Edit Speed Dials**

Button	Type	Label	Number	Action
1	Line	1 Demo User3 - 91205	91205	Edit
2	Line	2		Create
3	Speed Dial	1		
4	Speed Dial	2		
5	Speed Dial	3		
6	Speed Dial	4 Helpdesk	777	

1 - 6

3. On this page you may change these device settings:
 - **Device Name** – name of the device

- **Device Description** – edit the existing text
 - **Model** – this is the model of phone and you cannot change it. You can however delete this phone and add the correct one.
 - **Button Template** – select an item from the dropdown list. The phone button template defines which buttons on the side of the phone display are for lines, and which are available for speed dials.
 - **Softkey Template** – select an option from the dropdown list. Otherwise leave it blank to use the system default template.
 - **Expansion Module 1 or 2** – select an option from the dropdown list
4. To edit the phone buttons:
- The **Edit Speed Dial BLF** button takes you to the page to update the Speed Dial Busy Lamp Field settings - see 3.5.4 Edit BLF's speed dials (Modify User Device Profile / IP Phone)
 - The **Edit Speed Dials** button takes you to the page to update the normal Speed Dials – see 3.5.2 Change Device Name (Modify User Device Profile / IP Phone).
 - Click **Edit** next to a line to change the line settings – see 3.5.5 Modify or delete the line – basic settings (Modify Line) and 3.5.6 Modify or delete the line – advanced including Call Forward settings
 - Click **Create** next to a button to create a new line – see 3.5.7 Add a new line – (Modify User Device Profile / IP Phone)
5. When you are done, click an action button:
- **Previous** takes you back to the previous screen without saving the settings.
 - **Delete** will delete the phone.
 - **Save** keeps and applies the settings.
 - **Reset** will shut down the device and bring back up. The phone cannot be used while this is happening. Some CTI configurations require this to adopt the new settings
 - **Restart** will restart the device without shutting it down. This is less intrusive than a Reset.

*Note: It is good practice to **RESTART** a device upon completing all changes to a device, to ensure the changes are orderly. Where more complicated systems are connected such as contact centre CTI settings, a full **RESET** may be required.*

4 Bulk add and delete of users

Use this module to manage larger quantities of users using information in a spreadsheet style CSV file. This feature is enabled at time of installation if the appropriate license is purchased.

Data is checked prior to making changes

The bulk operations require user information in CSV (comma separated value) files. As part of the operation, the file content and format is checked prior to making any changes on the telephone system. The results of the checks are presented for each row of data, allowing you the option of correcting any discrepancies, or going ahead and making the changes anyhow. The check results may also be saved as a file.

All changes are included in reports

Results of any changes are also included in the standard reports.

4.1 Bulk Add Users – Process to add users in bulk

We suggest you use this process to add users in bulk lots.

Implement one site at a time

1. **Create the list of users** (UserID) and determine the appropriate phone profile for each one.
2. **Allocate the extension number** for each user. Optionally you can also use the number in AD or let the CFE allocate the next spare number at the site.
3. **Allocate the DDI number** for each user as appropriate.
4. Create the users within AD.
5. **Get the list of MAC addresses** for the phones. Allocate a phone for each user. Often your phone supplier can provide the MAC addresses for the phones being shipped to site.
6. **Install the phones.** Get the site contact(s) to install the correct phone (based on MAC address) for each user at the site. Each phone should auto register with the CUCM.
7. **Prepare the CSV file and import it.** The import will be successful if the CSV file has the correct information, the users are present in AD, the CUCM and AD are synchronised and the phones are installed. At this point the phones will become active.

4.2 Bulk Add Users – preparing the CSV file

The CSV file must have the following headings:

Template: 1

TEMPLATENAME,USERID,MACADDRESS,EXTN1,DDI1,EXTN2

Template: 2

TEMPLATENAME,USERID,EXTN1,DDI1,PUG

Where:

- **TEMPLATENAME** – is the user profile (such as “basic user”). The profile name must match the profiles configured on the CFE.
- **USERID** – is the UserID within AD and the CUCM. The user ID must be valid. If the user is already set up with a profile that is different to the one in this file, then a new profile will be added. A profile that is the same will produce an error.
- **MACADDRESS** – is the MAC address of the telephone device. The phone must be connected to the network in order for the import to be successful.
- **EXTN1** – is the extension number of line 1 for the user. You may enter #ALLOCATE# if you want the CFE to use the next spare number available at the site. Alternatively, you may enter #USEAD# if you want the number allocated in AD to be used.
- **DDI1** – is the direct external phone number for extension 1.
- **EXTN2** – is the extension number for line 2. This is only required for profiles that have two lines.
- **PUG** – is the **pickup group**.

Where any other settings are required in addition to the profiles or system defaults, change these individually after the import is completed.

```
-- Sample contents for upload file --
TEMPLATENAME,USERID,MACADDRESS,EXTN1,DDI1,EXTN2
Mobile User,testuser1,,88120,49022120,
Mobile User,testuser2,,#ALLOCATE#,,
Mobile User,testuser3,,#USEAD#,,
Basic User,testuser4,0000AABBCC01,88121,,
Agent,testuser4,0000AABBCC02,89120,,99120
--end--
```

4.3 Bulk Add Users – importing and processing the file

On the bulk Add Users screen:

Reports

Basic User	tuser6	AABBCCDDEEFF	12345	-	99005	Not Valid, this profile requires only 1 phone line	-

download csv 1 - 8

5. After clicking **Upload** the results of each line in the file are presented. The errors are shown so that you can correct your CSV file and re-import it.
6. Optional - Click **download csv** to save the results of the file check.

7. Click **Process valid rows** to apply the valid changes to the CUCM. Upon completion of the processing, the Process Result information is also included.
8. Optional - Click **download csv** to save the results of the processing.

4.4 Bulk Delete Users – removes phones and device profiles

Warning: *Delete phones and device profiles **before** deleting Users on AD, otherwise the phones and profile may be orphaned on the CUCM.*

Use this process to delete items from the CUCM prior to deleting the user from AD. When AD synchronisation is being used, the user may only be deleted from AD.

On the **bulk Delete Users** screen:

The screenshot displays the 'Bulk Delete Users' interface. At the top, a navigation bar includes buttons for 'Reports', 'Modify User', 'New Phone', 'Modify Phone', 'Bulk Add Users', 'Bulk Delete Users' (highlighted in red), and 'UCM Phones'. Below this is an 'Information' section with a chevron icon. It contains three main areas:

- Upload CSV File:** A text input field labeled 'CSV File' with a 'Browse...' button to its right, and a red 'Upload' button below it.
- Process Result:** A section with labels for 'Started at:', 'Finished at:', 'CSV Filename:', 'Rows Ok:', 'Rows Failed:', and 'Rows Skipped:'.
- Bulk Delete:** A section showing the text 'no data found'.

1. Click **Browse** to find the location of the CSV file on your computer. Select the CSV file.
2. Click **Upload** to check the contents of the file. The results of the check will be presented.
3. Optional - Click **download csv** to save the results of the file check.
4. Click **Process valid rows** to apply the valid changes to the CUCM. Upon completion of the processing, the Process Result information is also included.
5. Optional - Click **download csv** to save the results of the processing.

Note: If your CUCM is linked to AD, then the users will remain in AD, however their phone profiles will be deleted from the CUCM.

The CSV file must have the following heading

USERID

Where:

- **USERID** is a list of valid UserID's for the users who are to have all their phones and device profiles removed from the CUCM. Phones that are still connected should auto-register with the CUCM and be available for use again.

-- Sample contents for file --

Each report provides information about changes presented to the CUCM, with details including:

- Time and date
- Device name
- Result code (0 is successful. Any other number indicates the type of error.)
- Summary of result in words
- User who made the request

There are four reports:

- Add User Requests
- Modify User Requests
- Add Phone Requests
- Modify Phone Requests

To run a report

On the **Reports** page:

Search: Display: 15 ▾ Go Reset

no data found

1. Select the **report type** or enter an item to **search** on. Search items may be extension numbers, part of a MAC address, User, or item.
2. Select the number of lines to **display** in the report.
3. Click **Go** to run the report, or click **Reset** or clear the request.

6 Link to current documentation

Use the **User Guide** link to find the current CFE documentation on the Atea website. The website also has many tips and instructions in the “How-To” section.

7 Terms used in this guide

Term	Description
AD	Microsoft Active Directory. The CUCM is often synchronized to AD using the LDAP feature on the CUCM.
CAPSL	CUCM automated provisioning system for LDAP – optional feature on the Atea CFE.
CFE	Contained Front End – the application allowing users to perform a number of telephone and user related tasks without having direct access to the CUCM.
CLID	Calling line identification. Presentation of the calling telephone number.
CUCM	Cisco Unified Communications Manager or Call Manager. Telephones and users are set up on this device.
DDI or DID	Direct Dial In or Direct Inward Dial number. This is the public telephone number that may be used to call a specific telephone on the system.
Extension	A Cisco IP phone directory number or DN.
EM	Extension Mobility. A feature that enables users to log onto a telephone to automatically adopt their phone properties including phone number and speed dials.
PSTN	Public Services Telephone Network – This is the normal telephone network for public use.
UDP	User device profile. The device profile for an extension mobility user.
