

## **Password Guidance**

Choose a strong password for your account. A strong password uses a combination of upper and lowercase letters, numbers and special characters, and is longer than 8 characters in length. A passphrase (usually a sentence or phrase) can be easy to remember and contain many characters, which makes it much harder to launch certain attacks against.

As you type your password, you will be able to see how strong your password is by looking at the password strength indicator.

## **Password Protection**

Never share your password with anyone. If you forget your password, please use the forgot password feature. FAQ #3 <https://www.ladbrokes.com.au/faq/>

When selecting a password, do not re-use a password that you have used elsewhere. It is very common for criminals to attack a user's account on one service and, if successful, then try to access multiple other services with the same password.

It is good security practice to change your password at regular intervals. If you are ever suspicious that your password may be known to others please perform a password reset immediately.
