

Aptean Routing & Scheduling
Paragon Edition

Route Optimization for Multiple Depots

Aptean Routing & Scheduling *Paragon Edition* is an advanced route optimization software solution that can reduce planning time and decrease transportation costs. Multi Depot is designed specifically for the unique needs of multiple depot operations.

Plan Your Transportation More Efficiently

- › **Unparalleled Insight** - The planning team has visibility into every depot during the route creation process, reducing the likelihood of large resource imbalances while also alleviating slack and bottlenecks.
- › **Flexible Parameters** - With the Multi Depot version, vehicles in each fleet start at and return to the same depot, but depot boundaries can automatically flex according to demand and resource availability.
- › **Save Time** - Planned call data is used to determine the most efficient routes in minutes, saving hours of planning time and freeing up transport planners to do more strategic tasks.
- › **Cut Costs** - Cut transport costs by up to 30% and improve operational efficiency with better routes and more accurate arrival times, in addition to keeping vehicle mileage to a minimum.
- › **Incorporate Specific Data** - Operational details such as delivery quantities, customer addresses, time windows, vehicle fleet sizes and driver shifts can be taken into account when calculating routes.
- › **Leverage Powerful Business Intelligence** - Create custom performance reports to reflect specific KPIs, and then share in multiple formats.

Key Features

- › **Strategic Modeling** - Once you have completed your transport plan for the day, you can then carry out what-if modelling based on actual historical data from your transport operation
- › **Model Alternate Scenarios** - Once you have completed your transportation plan for the day, you can then carry out what-if modeling based on actual historical data from your transportation operation.
- › **Keep Business Functions Aligned** - Routing and scheduling details can be sent directly to the warehouse for picking and vehicle loading, ensuring all your functional areas remain aligned.
- › **Integrate with Applications** - Our solutions are designed for fast, easy integration with applications like sales order processing and warehouse management systems, further streamlining internal processes.
- › **Upgrade If Your Business Grows** - This Multi Depot version of Aptean Routing & Scheduling *Paragon Edition* was specifically created to address the challenges faced by multiple depot operations where vehicles in each fleet start at and return to the same depot. If your business's operations become more complex, upgrading to the Integrated Fleet version (accommodates movement from any fleet vehicle to/from any depot) can be done easily – without impacting your transportation operation.
