

# Maximise Efficiency by Automating Processes with Aptean Food & Beverage ERP

In the fast-paced world of food and beverage manufacturing, every minute is precious. Businesses are increasingly turning to process and workflow automation to **save time** and **improve productivity**.

86%

of employees believe automation can boost efficiency

56%

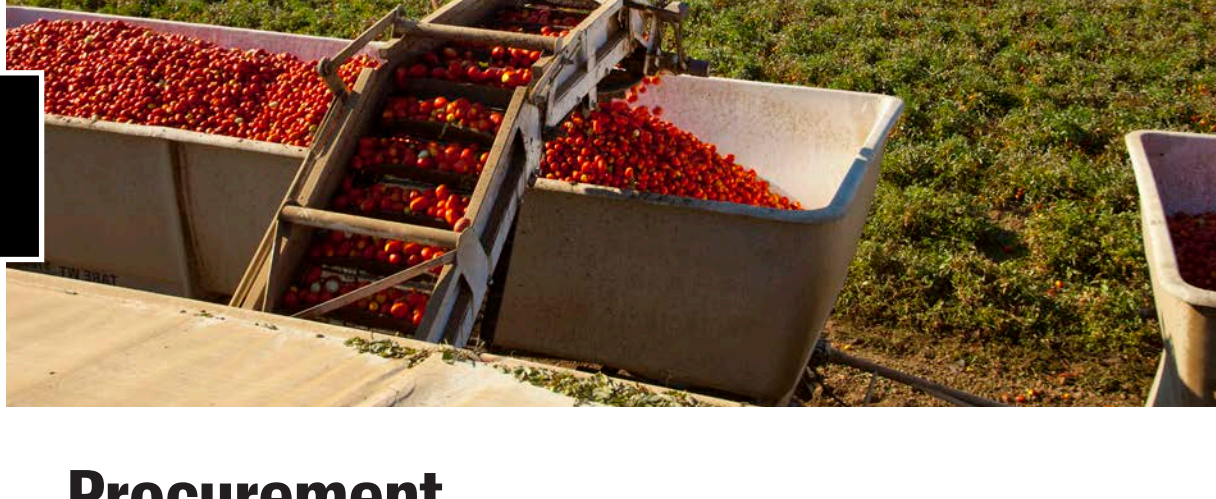

of food manufacturing businesses have invested in systems that can automate processes

Purpose-built **enterprise resource planning (ERP) software for food and beverage companies** can enable convenient and powerful automations that alleviate the need for time-intensive manual tasks from one end of your supply chain to the other.

## End-to-End Automations

1

### Procurement

- » Production planning features **automatically identify imbalances in supply and demand** to inform purchasing
- » Vendor item catalog module **automatically creates purchase orders** based on previously used parameters and suppliers' current inventory

2

### Inventory Management

- » Shop floor production functionalities **automatically account for material consumption and production output** in inventory records
- » Expiration management tools **automatically deploy alerts** when products are approaching their expiration date

3

### Production

- » Product specification features **automatically generate product details** based on raw material values
- » Production scheduling module **automatically schedules production orders** based on your predefined parameters

4

### Quality Control

- » Quality control tools **automatically prompt product standards verification** at predefined points in the manufacturing process
- » Items failing quality checks are **automatically placed on hold** for rectification or removal

5

### Sales and Fulfillment

- » Customer item catalog module **automatically notifies salespeople of inventory replenishments** as reflected in the system in real time
- » Sales orders can be **automatically generated using Excel files** emailed by customers

## The Power of Advanced Workflow

Aptean Food & Beverage ERP goes beyond the automations covered here and allows users to build their own based on a variety of process templates. The advanced workflow module lets you set:

- » Task duration
- » Personnel assignments
- » Process hand-offs

This allows you to increase operational efficiency even further.

These are just a few examples of the automations that our software offers, and all can make a meaningful difference by reducing the time required to complete manufacturing processes and taking full advantage of your operating hours.

Get the purpose-built food and beverage ERP software that drives efficiency, productivity and all-around excellence.
