

Build an Agile Food and Beverage Business in 3 Strategic Steps

aptean Ready for What's Next, Now™

Food prices have increased by 8.9% year-on-year⁽¹⁾ as cultivating, manufacturing and distributing products becomes more expensive.

How can food and beverage companies protect profit margins in this high-pressure environment? By making internal improvements.

Follow Aptean's 3-step strategy to **enhance your operational agility, lower production costs and identify new revenue streams.**

Step 1: Modernise

Replace manual and legacy systems with an infrastructure that can support the fast-paced, multichannel demands of modern food and beverage production.

- Invest in software that provides **real-time visibility** over your operations (including multi-site)
- Give your employees and partners access to centralised data for a **single version of the truth**

Step 2: Optimise

Find every opportunity to streamline and enhance your end-to-end operation.

- Use software-generated insights to **prioritise improvements** across your supply chain, production, maintenance, workforce and compliance capabilities
- Identify processes you can automate to **increase speed of production** and reduce manual errors

Step 3: Strategise

Make data-driven decisions every day to keep pace with customer demand.

- Use your agile infrastructure to **pivot production** in response to real-world insights, exploring new customer, channel and market opportunities
- Move towards **predictive models** that anticipate what your customers want next

Increase Your Agility with Aptean Food & Beverage

Aptean Food & Beverage ERP empowers your business to respond dynamically in a fast-moving food environment.

Complete Visibility – real-time data capture at every point in your supply chain.

Bi-directional Traceability – full ingredient and revenue tracking.
