

Aptean Food & Beverage ERP
JustFood Edition

Do Food Better

Is your head spinning from all the ERP platform choices out there? You've seen a few heavy hitters—they're the big name standards you know. But the solutions are generic. Maybe some have slapped on food-related customizations to try to make a fit, but they just don't know food very well. And you worry about becoming a small fish in a very big pond.

Enter Aptean. We know food. We know your unique challenges. We've been working with food companies for years—listening to their feedback and developing functionality to meet the needs of the industry. We're small enough to give you the attention you deserve, but big enough to grow with you and develop for your ongoing needs.

Aptean Food & Beverage ERP is enterprise management software designed exclusively for food companies. From the moment materials and ingredients enter your facilities, until the finished product is delivered, Aptean is there, helping manage every aspect of your business. We connect departments, data and processes into a single cloud ERP, giving you insight, visibility and control.

Benefits

- » Promote fluid workflow between departments, greater efficiency and more cost effective business practices with a single solution that gives you full visibility across the enterprise.
- » Improve forecasting, planning and budgeting accuracy with integrated financial management.
- » Enable recall and traceability of products to ensure safety, quality and compliance.
- » Lower management and IT costs by connecting departments, data and processes into a single cloud ERP.
- » Gain valuable insight into critical data so that your team can make better business decisions.

One Solution to Manage Your Food Business

When you invest in a platform developed specifically for the food industry, you remove the need to customize a generic ERP solution, dramatically reducing implementation costs and risks and accelerating time to value.

Aptean Food & Beverage ERP runs on the Microsoft Dynamics 365 Business Central cloud platform to provide the accessibility, scalability and reliability that you expect from your business management software. And because it is built on Microsoft Dynamics, it integrates with the other Microsoft products you use every day. Aptean delivers:

- › **Food Operations and Production Management** – Bring together data from every part of your business and manage all phases of the production cycle from R&D and costing to planning, scheduling and batch processing. Aptean gives you the oversight you need to identify any inefficiencies, so you can hit profitable targets.
- › **Food Safety, Quality and Compliance** – Capture the data and processes you need to ensure quality and control over your products, and meet safety and compliance standards with full traceability.
- › **Food Business, Finance and Accounting** – Built on a proven, reliable and scalable financial platform, Aptean Food & Beverage ERP ensures forecasting, planning and budgeting accuracy. Our team of project managers, business analysts and solution architects have decades of food industry experience, have deployed hundreds of implementations, and know the importance of a strong financial foundation.

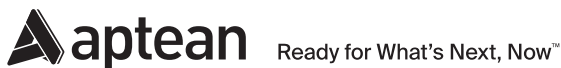

Key Features

- › **Quality** – Set up mandatory quality audits at every step of the production cycle to ensure product consistency and safety.
 - › **Food Safety / Compliance** – Leverage traceability, scheduling and quality functionality to optimize your compliance efforts with global food safety initiatives and regulations.
 - › **Warehouse / Inventory** – Manage picks, putaways and containers to easily keep track of inventory and its movement throughout your warehouse.
 - › **Manufacturing** – Integrate production scheduling and batch management for more accurate forecasting and cost-effective manufacturing.
 - › **Reporting / Analytics** – Measure performance and create accurate forecasts with real-time and historical production, sales and costing data.
 - › **Finance** – Gain greater visibility and insight into business performance through the sharing of costing data.
 - › **Plant / Preventative Maintenance** – Monitor equipment performance and set maintenance scheduling to ensure checks are completed after a set number of equipment uses.
 - › **R&D / Product Development** – Use recipe and production data to test new formulations, invent new products and discover more efficient production methods.
 - › **Sales** – Account for trade rebates and commissions, and better manage pricing and customer relationships.
 - › **Purchasing** – Leverage historical and real-time data to inform your purchasing schedule and better manage forecasting.
 - › **Options** – Companies that require additional features, such as advanced warehouse management, handheld device support, production scheduling and electronic data interchange (EDI), can choose from a number of available upgrades that can be added to the system at any time.
