

**Shop Floor Manager for
Aptean Industrial Manufacturing ERP
Made2Manage Edition**

Seamless Shop Floor Visibility and Control

Shop Floor Manager for Aptean Industrial Manufacturing ERP *Made2Manage Edition* allows customers to “slice and dice” their shop floors with ease. Labor and inventory transactions are consolidated in one convenient place, enabling shop floor supervisors to efficiently manage production. Shop Floor Manager consists of a Supervisor Console and a Work Center Console. Together, these two consoles eliminate the need for paperwork to communicate shop schedules, work order instructions, and material lists.

Supervisor Console (Point of Management System):

- › Easy visibility into all shop floor-related information
- › Real-time production statuses
- › Check material status
- › Release/prioritize work orders
- › Communicate with the shop floor

Work Center Console (Point of Entry System):

- › View online dispatch list of prioritized work orders
- › Access all information required for completion of a work order
- › Record labor and time worked
- › Issue materials for a work order
- › Move inventory to finished goods

Real-Time Shop Control

Primary shop floor management functions – setting work order priorities, releasing work orders, issuing material, moving inventory and reporting labor – can all be done from one place. Both the Supervisor Console and Work Center Console support easy, one-click access to comprehensive work order information.

Supervisor Console Supports:

- › Running “what-if” exercises to view potential impact on material allocation by releasing selected work orders
- › Accessing of work order release and material issues
- › Viewing detailed material availability at work order and component level
- › Viewing full drill-down to component and operation level for any work orders
- › Viewing every work order in which a specified component is used

Work Center Console Supports:

- › Accessing of material issues in a work order
- › Issuing of a “WIP Receipt” (manual or automatic based on operations)
- › Viewing work order details, including: materials or specified components used, operation instructions, and status of the work order
- › Identification of work orders by customer, sales order, part number, status, and more

Paperless Communication:

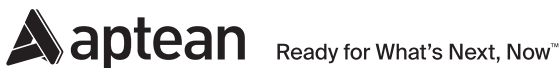

- › Eliminate the need for work order travelers and material pick lists
- › Communicate electronic work order instructions, priorities, and material lists between the Supervisor Console and Work Center Console
- › Attach CAD drawings to work orders and view on the shop floor
- › Create shop notes visible in the Work Center Console
