

Mondi Business Paper

Efficient Utilization of the Production Equipment

Industry

Packaging and Paper

Challenges

- » High productivity requirements
- » High cost for unplanned stops
- » Data spread in numerous systems

Benefits

- » Adapts to Mondi's processes
- » Integration with ERP system
- » Easy-to-use interface

Production efficiency is a crucial parameter in the paper industry, as the competition in the market is strong. The requirements for productivity and profitability in the high-tech production plants are considerable.

The time factor is critical, and the rate of production high. An unplanned stop in production can, in worst cases, be seen directly on the bottom line. Therefore Mondi Business Paper has invested in structuring and planning the preventive maintenance process in Aptean EAM *API PRO Edition* as their maintenance management system.

Development of New Processes

Like many other companies, Mondi had continuously implemented new IT-systems to handle different tasks. But over time, this budding of IT-systems became problematic. Not all systems could be integrated, and so data accumulated in various systems and remained inaccessible to other parts of the organization. This was the starting point for a thorough strategic reorganization of the maintenance related data.

Demand for User-friendliness

The two paper mills in Austria were going to be the first to implement the new integrated solution. It was necessary that the new system functioned across frontiers and had a simple and straightforward user interface.

The combination of SAP and the maintenance management system Aptean EAM's readily accessible functionalities and user-friendliness provided for these very demands.

Higher Data Quality and Savings

To ensure that users accept and get acquainted with the system, a test and training system was installed after implementing the necessary hardware. On this system, user training took place, and at the same time, it worked as a test environment where adjustments and improvements were made when required. The interface to SAP was implemented concurrently. After 200 lessons and training of 735 users, the system was ready for use – only five weeks after the system had been installed.

For Mondi Business Paper, it was important that the new EAM system functioned across frontiers and had a simple and straightforward user interface. Apteam EAM, with its easy access features and ease of use, meets those high standards. The fact that we already had data in digital form and that the Apteam EAM system ensured a troublefree migration of data from our old systems made the implementation run seamlessly.

“Today, we clearly see the benefit of the integrated solution. Our technicians have easy access to data and give feedback into the system themselves. We have experienced large time savings and higher data quality as a result.”

Bernward Ulm, Project Manager in the Competence Center Engineering Mondi
