

AURORA[®]

Aurora adds 3 new products to its product portfolio.

Product-Highlight

PEDANIOS 31/1 COS-CA

The new flower PEDANIOS 31/1 COS-CA (Cosmic Cream) is an indica-dominant variety that is produced in our EU-GMP plant in Canada using hang-drying, hand-growing and hand-filling.

Cosmic Cream, a cross of Gasberry and Alien Cake 3030, originates from our Aurora Coast research department and is our strongest flower variety with a measured batch THC level of 31.6 % THC.

A high terpene content of β -charyophyllene, limonene and linalool, paired with a high THC content for experienced patients, characterise this flower and make it a special highlight on the medical cannabis flower market.

Available soon

New balanced flower

PEDANIOS 10/13 MBE-CA

The new flower PEDANIOS 10/13 MBE-CA (Moon Berry) is a good choice for patients who are considering starting therapy with THC but do not want to forego the positive properties of CBD.

This special hybrid has lineage derived from two popular strains, Vespera and Equiposa.

This premium strain with a balanced ratio of THC to CBD has a berry, lemony flavour.

The main terpenes are β -myrcene and α -pinene.

The product PEDANIOS 10/13 MBE-CA can be prescribed from August.

New Diesel variety

PEDANIOS 27/1 PND-CA

Discover the new flower PEDANIOS 27/1 PND-CA (Pink Diesel)! The 100% unique flower has lineage of iconic Pink Kush and pungent Driftwood Diesel.

The main terpenes are limonene, myrcene, caryophyllene. The result is high-THC indica offering rich, blended flavour notes of gas, lavender, and spice.

Pedanios 27/1 PND-CA is cultivated under the highest quality standards using hang-drying, hand-finishing, and hand-bottling.

Cystolithic trichomes

Have you ever noticed bright white spots when visually inspecting cannabis flowers?

Although at first glance these may evoke negative associations, they may be cystolithic trichomes, which appear as slender, glandless hair structures. The white trichomes do not affect the quality of the product in any way, as they are merely basal deposits of calcium carbonate.

If you have any questions about these product peculiarities, our Quality Department will be happy to help you at any time.

JULY 2024

PEDANIOS 10/13 MBE-CA

Medical Cannabis

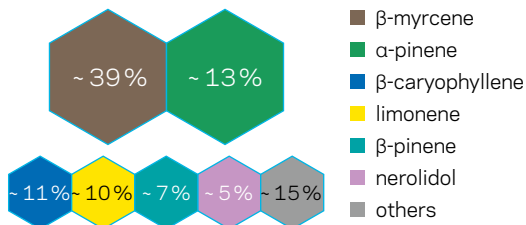

THC/CBD:	approx. 10 % THC approx. 13 % CBD
Dominance:	Hybrid
Cultivar:	Moon Berry
Genetics:	Vespera & Equiposa
Origin:	Canada (CA)
Unit:	10 g

Strain description:

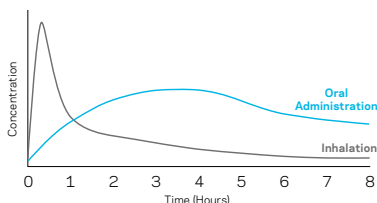

This premium strain with a balanced ratio of THC to CBD is characterised by a delightful aroma of berries, cream, and lemon. The main terpenes, β -myrcene and α -pinene have analgesic, anti-inflammatory, and relaxing properties, and may have a beneficial impact on symptoms such as sleep disorders, stress, and depression.¹ Moon Berry is a great choice for those looking for a full-flavoured experience and the therapeutic benefits of moderate THC and balanced CBD.

Terpene profile:

Shown as a percentage of the total terpene content. Percentages are averages over multiple batches.

Plasma level of THC:

Blood plasma levels of THC after oral administration or inhalation intake [modified from Grotenhermen 2003]²

Inhalation:

Onset: after 2 - 8 min
Peak effect: after 10 - 30 min
Duration: 2 - 6 h

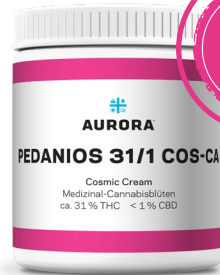

Using a vaporiser is a very efficient, fast-acting, and medically recommended form of administration. The optimal temperature setting is between 175 and 210°C.

PEDANIOS 31/1 COS-CA

Medicinal Cannabis

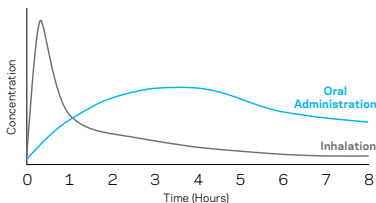

THC/CBD:	approx. 31 % THC < 1 % CBD
Dominance:	Indica
Cultivar:	Cosmic Cream (COS)
Genetics:	Gasberry, Alien Cake 3030
Origin:	Canada (CA)
Unit:	10 g

Strain description:

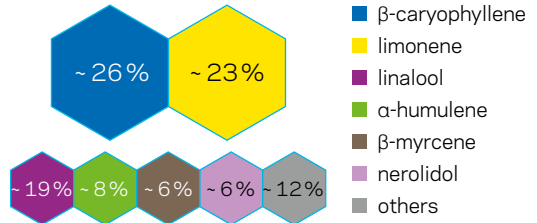

This Indica strain offers an aroma of sweet, fruity cereal milk with earthy undertones. Bred from exclusive lineages, Cosmic Cream displays green acorn-shaped buds frosted over in trichomes. Grown under the highest quality standards using hang-drying and hand-manicuring techniques, then carefully hand-bottled. The main terpenes of Cosmic Cream are caryophyllene, limonene and linalool, which have analgesic, anti-inflammatory, sleep-inducing, and relaxing properties.¹

Plasma level of THC:

Blood plasma levels of THC after oral administration or inhalation intake [modified from source Grotenhermen 2003]²

Terpene profile:

Shown as a percentage of the total terpene content. Percentages are averages over multiple batches.

Inhalation:

Onset: after 2 - 8 min

Peak effect: after 10 - 30 min

Duration: 2 - 6 h

Using a vaporiser is a very efficient, fast-acting, and medically recommended form of administration. The optimal temperature setting is between 175 and 210°C.

Flowers with a high THC content limit the negative effects of vaporisation, as patients need to consume less to achieve the desired effect.

PEDANIOS 27/1 PND-CA

PEDANIOS 27/1 PND-CA

Medicinal Cannabis

THC/CBD: approx. 27 % THC
< 1 % CBD

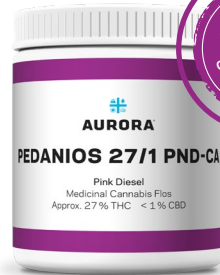

Dominance: Indica

Cultivar: Pink Diesel (PND)

Genetics: Pink Kush
Driftwood Diesel

Origin: Canada (CA)

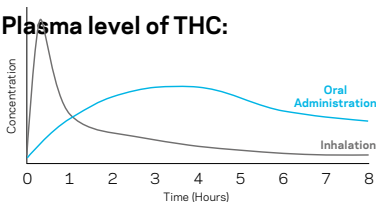

Unit: 10 g

Strain description:

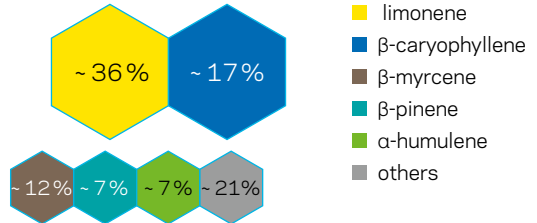

This premium strain offers a rich, combined flavour notes of gas, lavender, and spice. It is cultivated under the highest quality standards and is hand-finished and hang-dried. The primary terpenes, limonene, myrcene, and caryophyllene, are thought to have analgesic, and calming properties while also offering immunostimulant, and antidepressant effects. These terpenes can also be beneficial for reducing tension and anxiety.¹ Owing to its ability to induce sleep, it is advised to use this strain in the evening.²

Plasma level of THC:

Blood plasma levels of THC after oral administration or inhalation intake [modified from source Grotenhermen 2003]³

Terpene profile:

Inhalation:

Onset: after 2 - 8 min

Peak effect: after 10 - 30 min

Duration: 2 - 6 h

Using a vaporiser is a very efficient, fast-acting, and medically recommended form of administration. The optimal temperature setting is between 175 and 210°C.

Flowers with a high THC content limit the negative effects of vaporisation, as patients can consume less to achieve the desired effect.
