

JULIE FRATANTONI, PHD, CCC- SLP

HEAD OF RESEARCH AND STRATEGIC PARTNERSHIPS

Julie Fratantoni is a cognitive neuroscientist who specializes in making neuroscience approachable and creating tools that help people become proactive about their brain health by building healthy habits.

Dr. Fratantoni leads the user experience and content creation for [The BrainHealth® Project](#) – a 10-year, longitudinal research study seeking to define, measure and improve brain health and performance across the lifespan. She leverages behavioral science for the development of the online BrainHealth dashboard and mobile app where participants access assessments (BrainHealth Index), coaching and training.

She also leads the center’s Kindness Enterprise, a research and translational program seeking to uncover and harness the brain’s capacity for kindness, empathy and compassion as critical components of overall brain health and well-being.

Having led high performance brain training for corporate executives, veterans, athletes and young adults, she finds her work most rewarding when she can empower individuals to operate at their highest capacity, reduce stress, achieve their goals and be the best version of themselves.

Dr. Fratantoni received her PhD in cognitive neuroscience from The University of Texas at Dallas and is also a licensed speech language pathologist, board certified in biofeedback, and trained in mindfulness and meditation techniques.
