

5 **FACTS** ABOUT FAKE PILLS

- 1 Fake prescription pills show up in lots of places—social media, parties, campuses— and since the pills aren't from a pharmacy, they're almost certainly fake.
- 2 Fentanyl is one of many dangerous chemicals showing up in pills. Others include: Nitazines, Xylazine, Cychlorphine.
- 3 Just 2mg of fentanyl (a few grains of salt) can be fatal.
- 4 In the U.S., fake prescription pills are taking the lives of hundreds of teens every year.
- 5 You CAN'T tell what's in a pill by looking at it—even dealers don't know.

**REMEMBER:
NO RANDOM PILLS.**
