

# SAFEGUARD YOUR KIDS FROM DEADLY FAKE PILLS

Fentanyl is a synthetic opioid 50 times stronger than heroin. It's showing up in fake pills sold online as prescription medications your child might recognize, like Percocet, Adderall and Xanax, and in street drugs like cocaine and ecstasy. These pills are made to look just like the real thing, but even one can be deadly. Parents need to understand these hidden dangers and talk with their kids about the risks.

**START THE CONVERSATION TODAY – VISIT SONG FOR CHARLIE'S NEW DRUG TALK.**

Song for Charlie's New Drug Talk program offers expert-backed resources to help you have these life-saving conversations and protect your children from pills made with fentanyl and other dangerous drugs.
