Details	Salicylic acid is an oil-soluble, beta-hydroxy acid. Provides strong chemical exfoliation, dissolving oil, dirt, and breaking down dead skin cells that clog pores			Benzoyl peroxide clears acne by penetrating deep down into pores, killing acne-causing bacteria The use of micronized benzoyl peroxide allows for less irritating, deeper penetration into skin		Adapalene is a topical retinoid approved to treat acne and help regulate skin cell turnover to keep pores from clogging Prescription strength OTC, acts as an anti-inflammatory agent to reduce acne redness and swelling at the source	Sulfur is a naturally occurring anti-inflammatory element with antimicrobial properties Dries out the top layer of skin, absorbing excess sebum, and sloughing away dead skin	Non-medicated, hydrocolloid blemish patches are easy to use and will start to turn white to visibly show they're working as they absorb fluids	AHAs and PHAs are water-soluble acids that provide chemical exfoliation at skin's surface Difference in molecular composition and size allow them to deliver a range of benefits		Niacinamide is a form of vitamin B3 that is an antioxidant and skin conditioner Helps strengthen the skin's moisture barrier	Retinol is a topical retinoid that is a refined form of vitamin A Exfoliates and complements the natural cell turnover process Our patented sustained-action technology delivers retinol with slow release to reduce irritation potential
