

# Efficient Product Rebates

## Commercial Solar Space & Water Heating Rebate Guide

The following table lists the product requirements and rebates available for energy-efficient commercial solar thermal products.

\*If your annual electricity consumption is less than 600,000 kWh (approx. \$6,000/month, not including demand charges) and you have not yet purchased your product, your business may qualify for rebates in addition to those listed here.

Product	Criteria	Rebate
Solar domestic Hot Water (DHW) Systems  Solar Space Heating Systems	<ul style="list-style-type: none"><li>Energy analysis must be submitted with application</li><li>Rebates are only available for projects that offset electricity. Application must be approved prior to the purchase or installation of any solar equipment</li><li>Must be CSA approved</li></ul>	Determined on a project-by-project basis. Maximum of \$500 per panel.

Your energy analysis can be obtained from your contractor. RETScreen is Efficiency Nova Scotia's preferred modelling software.
