pbserum HA

Low Medium High

The only recombinant enzymatic system in the world for facial and body tissue remodeling

- **The latest generation of recombinant enzymes** developed using pbserum technology involves the integration of the recombinant gene directly into the bacterial chromosome.
- This innovation improves the **stability and efficiency** of production, resulting in **greater purity and higher productivity.**

Lyase PB72K | Lipase PB500 | Collagenases G&H PB220

Non-cross-linked High Molecular Weight Hyaluronic Acid pre-filled syringe

Lyophilized enzymatic system

Reconstitution solution

Indications

HA Low

Face reshaping

HA Medium

Double **chin**

Localized **fat**

Cellulite

HA High

Postsurgical **fibrosis**

Scars

pbserum HA

Reconstitución del producto

Pre-filled syringe of High Molecular Weight Hyaluronic Acid (HMW-HA) must be mixed with the lyophilized enzyme system.

Draw the necessary volume from the reconstitution solution to reach the desired final volume.

Mix the solution prepared in step 1 (Enzyme System + HMW-HA) with the reconstitution solution prepared in step 2. If you wish to add lidocaine 2%, you may do so as a last step to the final volume by adding a maximum of 0.5 ml.

Ready to use · Easy to apply · Minimally invasive
