

HOW TO LIGHT

1. Place two Tacoma Firelogs parallel to each other on a flat surface, leaving a small 1" gap.

2. Place one Firestarter in between the two logs, with the round side facing down. The edge of the Firestarter should be close enough to touch both logs. Adjust spacing accordingly.

3. Stack two more Tacoma Firelogs perpendicular on top of the base logs, with the same 1" gap.

4. Light the Firestarter with a match or long lighter.

5. Wait until the logs are burning with a strong flame before closing any doors or damper vents.

WARNING: Logs may move while burning. Keep any screens or doors closed for protection. Follow your manufacturer's stove or insert instructions.
