INTRODUCTION

Xrock X88-Series of breaker booms are designed for hard rock breaking and raking in grizzly applications. The boom structure is optimized for underground mining conditions with small pedestal footprint and flexibility in tight space.

The boom sections are strengthened with additional plates to increase load carrying capacity and torsional stiffness. The X88-series of booms has a unique flexibase design to reduce vibrations in boom slew gear and foundation. X88-Series consist of two different models from 5.5 m horizontal reach up to 6.7 m.

Xrock X88-Series booms are designed to carry hydraulic breakers from 1300 kg to 2300 kg and especially tailored for Normet Xrock XB breakers. The system is powered by Normet Xrock Hydraulic power units which are streamlined to fit for the Normet Xrock breaker and the boom.

XROCK®

POWER UNITS

All Normet Xrock power units offer a streamlined power resource for breaker booms and breakers to maximize the performance. The Power units are modular systems with wide access points for service. Power unit motor control panels are PLC controlled. All electric connections and panels are IP65 rated.

Power units have minimum 110 % capacity integrated trip drays for hydraulic oil to meet environmental regulations and avoid oil leakages. The system can be equipped with an automatic fire extinguisher.

CYLINDER SLEW WITH ROBUST PEDESTAL

X88-Series of booms are slew ring type systems. The slew ring enables 360 deg maximum operation area. Boom control valve and rotating gear are easily serviceable and located in pedestal. The pedestal has a vibration isolation system called flexibase.

RELIABLE CONTROL SYSTEM AND ELECTRONICS

The boom is controlled by accessorial radio remote control.

All exposed control components are IP65 rated. Cables and connections between boom, radio controller and power unit are designed for harsh mining environment.

AVAILABILITY FOR STATE-OF-THE-ART AUTOMATION

XROCK[®]
