Take control of your clean energy journey with

 egg

We're on a mission to crack clean energy

Hi, we're Egg.

Get your fixed price quote

We're on a mission to create a more sustainable future for our customers and the planet.

In a world where fuel and energy costs are on the rise, we offer an affordable, green and sustainable way of life for you.

We believe energy should be simpler, easier and cleaner, for everyone. Let's get cracking.

- We tailor it to you**
We know your home is unique so we design our solution to meet your needs. We recommend solutions that will help you meet your green energy goals.
- We are your trusted expert**
Our expert Egg team are on-hand to make your transition to a more sustainable future run as smoothly as our products.
- We keep it simple**
We're here to give you complete peace of mind. No jargon, just straightforward advice. You're in control (and in safe hands).
- We make it affordable**
Clean energy shouldn't cost the earth. We make it affordable for you to make your clean energy transition. Good for your bank balance, great for the planet.

Proud to be award-winners, all thanks to you, our amazing customers!

With Egg, you're in great hands.

- ★ Impact fifty award
- ★ EVIEs best new product
- ★ REA Installer of the year

We're working alongside

"The company itself from start to finish has been brilliant"

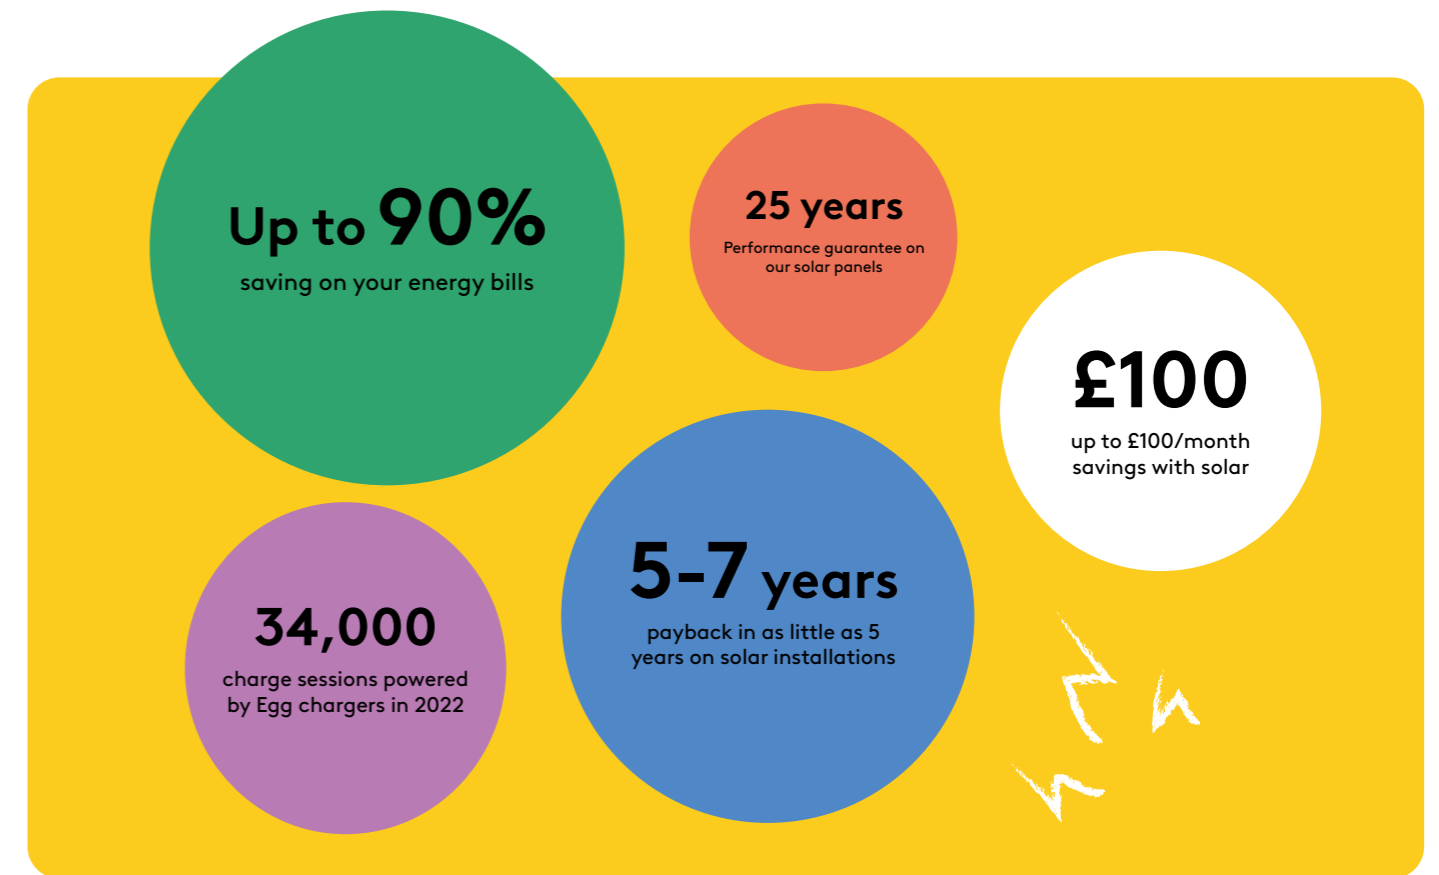

The engineer Reece who came to my house was amazing. Understanding, and went the extra mile with my install. Overall a great young man brilliant at his job and explained everything from start to finish.

J Blair
United Kingdom

The grass really IS greener on the other side. The impact of switching to clean energy solutions.

- Positive environmental impact
- Long-term cost savings
- Energy efficiency
- Creating a sustainable future
- Health benefits
- Increase the value of your home
- Future proof your home
- Better quality of life

Green energy myth busting with Egg!

"It's too expensive to install green energy solutions"

We have a range of solutions that are more affordable than you think and will reduce your energy bills from day 1.

"It's difficult to understand if how much energy and money I'm saving"

We give you the tools you need to track the performance of your new products.

"It's complicated to manage - what happens if something goes wrong?"

We make it simple; from designing a solution to suit your needs to ensuring it performs for years to come.

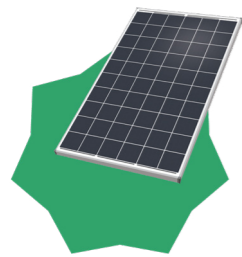

Saving with solar is as easy as... A, B, C

A

Start your journey in under two minutes

Simply answer a few questions about your home to get your instant fixed price solar quote. It only takes 2 minutes...

Solar only package

From
£ 4,999
8 panels

Solar only + battery package

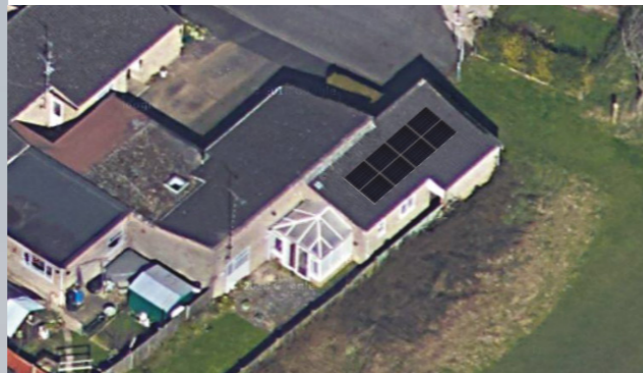

From
£ 7,205
8 panels

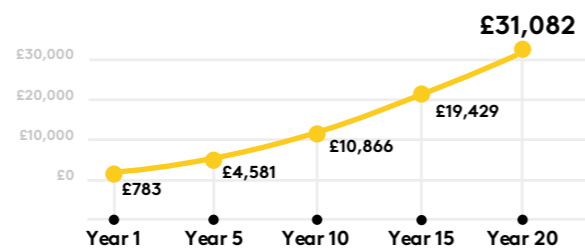

B

Review your package and savings

View your recommended packages and see what works best for you. Don't worry, our friendly Egg team is on hand to chat if you have any questions.

20-year energy bill savings

Based on shade-optimised 8 panel system with batteries

C

Sit back, relax and start saving with solar

Our Egg experts will take care of the rest; from planning to installation, you're in safe hands.

With installation in as little as two weeks, a sustainable future has never been easier.

Elena and Dan

Whole home solution - Solar + Battery

"Looking back at when we first started researching the solar and battery combo we knew it made sense financially as we could see it would reduce our energy costs, lower our risk and exposure to energy price increases... but it was never just a financial decision for us."

There was something about committing to a brighter future that Elena found hopeful - something that would not only have a positive impact on the planet, but set a sustainable example closer to home as well.

"The panels are on the rear of our roof, and the house backs onto the kids' school - so when the kids are in class and learning about energy efficiency, their school friends can look out of the window and see what it looks like in action. It makes it tangible and more meaningful."

The cost savings were amazing though and a few months after installation, Elena's home was 93% self-powered - with 63% of that coming from the solar panels during the day, and the remaining 30% from stored energy.

"Yes, it is a big leap to get solar, and an even bigger leap to think about battery storage," says Elena, "but if anyone considering making the investment were to ask me for advice, I would have to say take the leap. It just makes sense."

"In the past six days alone, we have actually been **entirely off-grid**"

"Take the leap. It just makes sense"
