ABOUT THIS GUIDE

Environmental Choice is New Zealand's official environmental label, initiated and endorsed by the New Zealand

Government, although independently operated, and recognises the increasing effort of manufacturers to reduce the environmental impact of their products.

The foundation of Environmental Choice is the stringent technical specifications it develops, which products must meet to be licensed to use the distinctive and well recognised Environmental Choice logo.

Environmental Choice operates to internationally recognised standards and principles, and is a member of GEN, the Global Ecolabelling Network, which links a world of environmentally preferable products and services.

In this booklet, you will find a list of Dulux products that have the Environmental Choice licence.

ECNZ License	0705019
Number: Version:	August 2022
License Issue Date:	July 2005
Specification:	EC-07-18 Paints
Geographical scope:	New Zealand

For the most updated version of the license, visit [environmentalchoice.org.nz](https://www.environmentalchoice.org.nz)

INTRODUCTION

At DuluxGroup, our core purpose to ‘imagine a better place’ anchors our approach to sustainability.

We help our consumers to imagine and create better places and spaces in which to live and work. We do this by manufacturing and marketing a wide range of products that enhance, protect and maintain those places and spaces. We recognise that doing business in a responsible and sustainable way is critical for us to earn and maintain the respect and trust of all stakeholders including our consumers, customers and communities, our environment, and our employees.

Our Safety and Sustainability policy describes our vision of ‘A Future Without Harm’ and expresses our commitment to continually improve the safety, health, environmental and community impacts associated with our products, operations and people.

New Zealand Green Building Council

Dulux New Zealand has been a member of the New Zealand Green Building Council since 2006. The NZGBC established Green Star and Home Star sustainable building standards.

Community involvement and our people

As a New Zealand manufacturer, we are proud to contribute to local employment and add to the prosperity of the communities in which we operate.

Dulux continues to give back to the community. Dulux has partnered with the Department of Conservation (DOC) to help protect and promote the Heritage Huts along the walking and tramping trails throughout New Zealand. DOC’s network encompasses over 900 iconic huts and lodges, some of which are historically listed. Dulux provides technical know-how, where required, and expert colour advice for the scheme – creating natural colour palettes inspired by the coast, tussock lands, forest ranges, sun plains and mountain-top scenery.

At a more grassroots level, Dulux donates paint and accessories to community fundraising programmes such as Habitat for Humanity homes, community centres, local sports clubs, schools and kindergartens.

PRODUCT STEWARDSHIP

Dulux produces paint products primarily at our Gracefield factory in Lower Hutt. We take raw materials such as polymers, pigments and extenders and manufacture them into packaged paint products. These are then distributed throughout New Zealand via an integrated warehouse and stores system. Once purchased, product is applied and then empty paint packaging can be recycled. An illustration of the Dulux paint life cycle is shown opposite.

Product Development of Acrylic Paints

Dulux New Zealand manufactures over 8.8 million litres of paint per year. Dulux's Gracefield, Lower Hutt manufacturing facility manufactures solely water-based paints and coatings. The environmental benefit is better air quality with reduced solvent vapours in the atmosphere as the paint dries. The New Zealand-made water-based paint emits mainly water vapour into the air. Dulux continues its commitment to further develop technology and innovation in the water-based acrylics market with a focus on minimising environmental impact.

Low VOC Paints

Dulux is at the forefront of introducing low VOC paints. Low VOC paints are lower in Volatile Organic Compounds, thereby creating fewer emissions and less odour. Among our low VOC products are the Dulux Wash&Wear[®], Professional[®], and Enviro2[®] ranges. As well as, the tinter system used to deliver Dulux colour. Dulux is committed to further develop our low VOC offer.

Post-consumer waste management programme

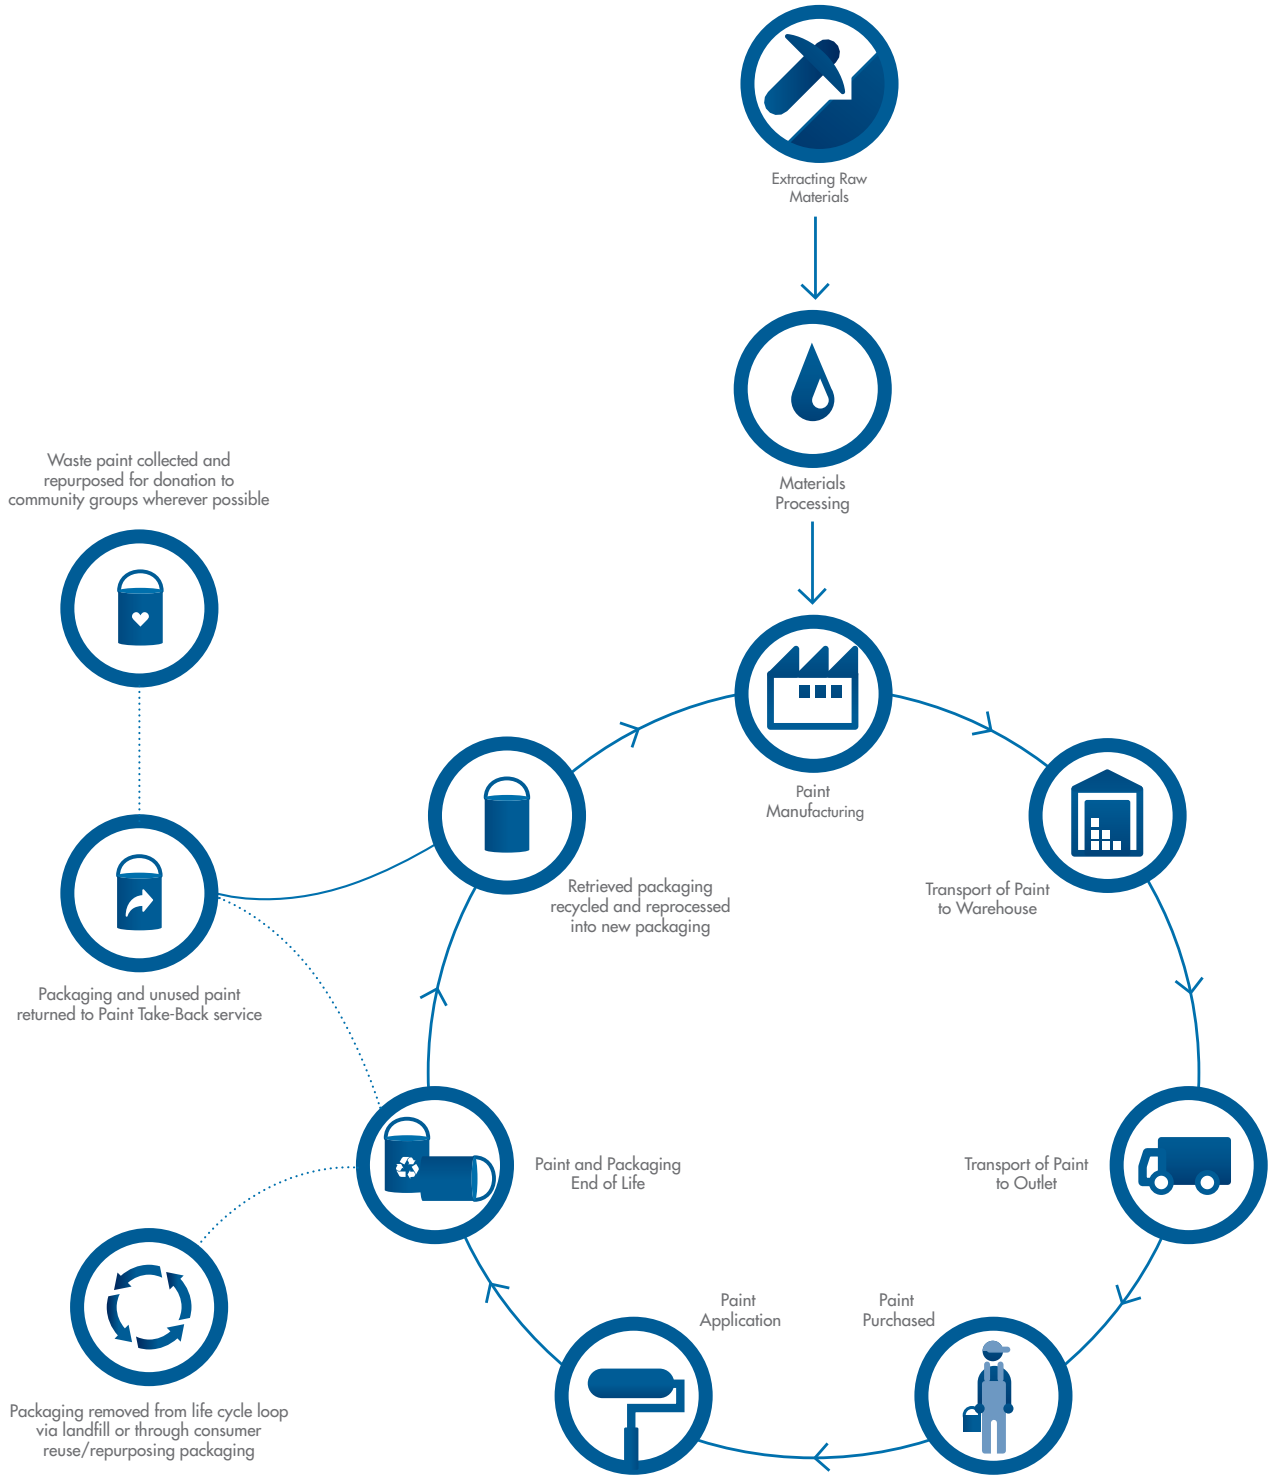

The Paint Take-Back service was established in 2009 and is a service offered as part of DuluxGroup's commitment to the environment. Left over paint and used paint packaging may be returned to all Dulux stores and selected Guthrie Bowron stores nationwide. From here they are collected, and either recycled or disposed of in an environmentally friendly way.

Recycled water-based paints may be donated to community groups for uses such as graffiti abatement. Accepted solvent based paints are sent for solvent recovery or responsible disposal and packaging is then recycled.

The recycled plastic pails are reground back into Dulux plastic In-Mould Labelling (IML) pails. Dulux currently incorporates approximately 15% recycled content back into its pails as a result of the Paint Take-Back programme with a goal of increasing to 50% post-consumer recycled plastic by the year 2025.

DULUX PAINT LIFE CYCLE

PREP COAT

Dulux 1Step Prep™

Dulux 1Step Prep™ is your first step toward a superior long lasting paint finish. With mould resistance and stain blocking of tannin and flash rust, Dulux 1Step Prep ensures your interior or exterior paint shines now and into the future. Use Dulux 1Step Prep for all general paint surfaces around your home including interior and exterior walls, ceilings, doors, windows, trim, and especially where mould is a problem including kitchens, bathrooms and outside areas.

Range	Gloss Level	Colour Base	Line Shade	Spread Rate m ² /L	Coats	L/m ²	VOC g/L

Dulux Enviro2 Interior Ceiling Flat	Flat	White	59C84179	16	2	0.125	<1

INTERIOR BROADWALL

Dulux Wash&Wear®

Dulux Wash&Wear® is our leader for washability performance. It forms a velvety finish that is hard-wearing and easy to keep clean. It gives walls the ultimate protection to stay looking freshly painted for years, reducing the need to repaint as frequently.

The Wash&Wear® +Plus range delivers even better performance for specific project needs. For example, Wash&Wear® +Plus Kitchen & Bathroom provides the same 101 Barrier Technology of standard Wash&Wear, fortified with a powerful mould-inhibitor. This gives exceptional washability and is developed specifically for damp and humid environments such as kitchens, bathrooms and laundries.

Range	Gloss Level	Colour Base	Line Shade	Spread Rate m ² /L	Coats	L/m ²	VOC g/L

Intergrain® UltraDeck® Timber Stain & Timber Oil

Intergrain UltraDeck is an extremely long lasting, water based oil for decking and exterior timber. UltraDeck contains unique Hydroguard technology to guard timber against New Zealand's harsh conditions as well as the abrasive effects of foot traffic. The natural looking finish resists stain absorption and dirt and dust adhesion, helping timber stay clean. The result is timber that stays protected and looking fresh for significantly longer than traditional decking oils.

Range	Gloss Level	Colour Base	Line Shade	Spread Rate m ² /L	Coats	L/m ²	VOC g/L
