

Australia's First Carbon Neutral Paint Certified by Climate Active

Australia's First Carbon Neutral Paint Certified by Climate Active

Dulux® enviro2™ is certified Carbon Neutral by Climate Active, Australia's widely recognised and government-endorsed carbon neutral certification program.

This certification demonstrates that the full Dulux® enviro2™ interior range has undergone comprehensive life-cycle assessment, with emissions measured, reduced and fully offset to deliver a verified low-carbon paint system for sustainable interiors.

Why this matters for sustainability-led interior projects?

- Supports credit achievement within Green Star projects
- Provides confidence in meeting project sustainability targets
- Provides clear alignment with building rating tools

The Environmental Choice for Australian Interiors

Dulux® enviro2™ is unparalleled in Australia for projects requiring eco-certified paint.

It is certified by two of the most robust, trusted and globally recognised eco-certification programs, Global GreenTag™ & Declare®, and has an independently verified and registered Environmental Product Declaration (EPD). It's the environmental choice for all professional painters.

The enhanced green certification allows Dulux enviro2™ to be used and achieve credits on green building projects such as GreenStar, WELL and Living Building Challenge (LBC). Product data, environmental certifications and supporting documentation are available via www.dulux.com.au/about-us/sustainability/certifications/

Leading the way with sustainability certifications

Why specify Dulux® enviroO₂™ for sustainable projects?

The Dulux® enviroO₂™ interior paint system has been developed to respond to common project considerations such as meeting environmental targets, supporting building certifications and delivering healthy, high-performing interior environments.

Supporting project carbon targets

The Dulux® enviroO₂™ interior range is certified Carbon Neutral by Climate Active, providing a **certified low-carbon interior paint** system suitable for projects seeking to support carbon-reduction objectives.

Enabling alignment with leading sustainability frameworks

Dulux® enviroO₂™ is backed by recognised third-party environmental certifications. These certifications provide clear material transparency and verified environmental data to

- support Green Star, NABERS, or LEED certification efforts,
- help meet ESG targets
- provide a Responsible Product Value (RPV) of 30 to maximise Green Star outcomes

Delivering performance without compromise

Dulux® enviroO₂™ delivers premium application properties and durable interior finishes, including;

- **resistance to mould,**
- **high opacity & washability,**
- **and stain resistance.**

making it suitable for commercial and high-traffic environments.

Simplifying interior paint specifications

Dulux® enviroO₂™ is formulated as a complete interior paint system, including preparation, walls, ceilings, doors and trims. Designed to perform together, the system supports consistent specification and application, **reducing on-site complexity and simplifying interior paint specification.**

Supporting healthier indoor environments

Dulux® enviroO₂™ supports improved indoor quality as a very low VOC, low-odour interior paint system,

- **contributing to better indoor air quality and**
- reduced environmental impact during application and occupation.

Established across complex and large-scale projects

The Dulux® enviroO₂™ interior paint range has been specified across a range of health, civic and commercial developments, where environmental certification, material transparency and system performance are key project considerations.

Royal Hobart Hospital Redevelopment

Dulux® enviroO₂™ was specified to meet stringent material transparency requirements while delivering very low VOC and low-odour performance, enabling interior works to proceed with minimal disruption in high-occupancy clinical spaces.
