

Security, data privacy & compliance overview

Trusted by Fortune 500 and leading growth companies, Labelbox's training data platform includes premium security that scales with your organization's needs and gives you peace of mind. Labelbox offers basic and advanced features that help you keep your data secure. Additional features are available for Enterprise and Pro customers based on your requirements.

Security

- Save time and reduce the risk of security breaches with full user lifecycle management. View and control the training data work across your organization and easily standardize policies from a central location.
- All labeled data, assets, and private user information hosted by Labelbox is encrypted at rest using AES256 or AES128 and via TLS in transit.
- Regular penetration testing and security assessments are conducted to ensure comprehensive protection from any cyber threats.
- Single sign-on (SSO) is available and configured by our engineering team based on need.

For more information, you can reference our security documentation (<https://labelbox.com/docs/introduction/security-and-privacy>), or contact us to learn more.

Deployment options

When you integrate with Labelbox, you have three deployment models to choose from as detailed below. Your security options will depend on the type of deployment model you choose.

Cloud: Labelbox offers data storage services and enterprise-grade security for all raw assets and labeled data stored in the Labelbox cloud. The cloud solution offers the most accessibility to our advanced features.

Hybrid cloud: Customers have sole access to their raw assets while still enabling labeling in Labelbox. In this configuration, Labelbox cannot access any raw data assets.

On-premises: All of the customer's data (raw data and labeled data) is hosted entirely on your servers. Labelbox does not have access to your data. Air-gapped deployments are also available.

Data privacy & compliance

Labelbox is committed to protecting the data that we collect, use, and process.

Our comprehensive privacy program helps you meet your corporate policies along with applicable privacy and security laws and regulations, and to safeguard the personal data of our customers. Labelbox is currently in the control period for SOC-2 compliance.

To learn more about our privacy practices and how we comply with CCPA and GDPR, see our Privacy FAQ (<https://labelbox.com/company/privacy-faq>).
