Ephesoft Enterprise

Intelligent Document Capture and Data Extraction

In the New World of Work, important information is often generated in nontraditional formats. If you have field agents or employees that regularly use a mobile device, you probably already know the challenge of integrating email, faxes and mobile phone images into your digital processes. Many organizations rely on traditional scanning to route information where it needs to go, but variations in document types can confuse scanning engines and stall processes. Platforms that charge per document scanned can also leave you with unpredictable costs.

There's a better way. Ephesoft Enterprise is an intelligent document capture and data classification platform that automates scanning processes – capturing data from mobile devices, email, paper and more. It accelerates the identification of various document types and extracts meaningful data to feed back office applications. This platform is priced per CPU, so you can improve the flow of information without the incremental expense.

This Solution Features:

Subscription-Based Pricing Model

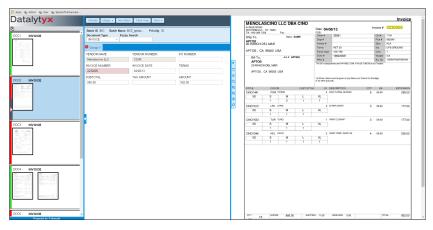

Predictable pricing – not per-document pricing – lets you use your operating budget rather than your capital expenditure budget.

Key Capabilities

Ephesoft Enterprise focuses on the capabilities you need and eliminates bloatware.

Quick Training Process

It only takes days – instead of multiple weeks – and a few sample documents to get Ephesoft Enterprise up and running.

Ephesoft Enterprise utilizes a drag & drop user interface with a clean tree view for simple navigation.

Who Can Benefit

• Organizations that want to reduce costs for everyday business processes while improving the way they capture and process information

Benefits

- Support the mobile capture of critical business data at point of origin no more manual scanning processes
- Make better business decisions with near real-time access to actionable data
- Save time, eliminate repetitive tasks and streamline the data process
- Meet compliance deadlines with ease with more advanced, efficient workflows
- Automate the data collection process and get up and running in days, instead of months

Using this Solution

- Extract key information from paper, faxes, PDFs, email attachments and more
- Process a wide variety of documents for a number of business applications including expense reports, accounts payable/receivable, medical records, mail room correspondence, tax forms, loan applications and more
- Use Analytics features to fine-tune your business workflow for faster time to market and a more satisfied user community
- Access the Advanced Reporting Module for analysis grids, extraction correction reports and document correction details
- Make decisions as the data flows, not days or weeks later
- Provide seamless data integration into most back-end databases out of the box and decrease manual entry errors
- Enable multiple data capture methods including smartphones, tablets, network scanners and data repositories

Implementation

- Train Ephesoft Enterprise to recognize documents with just a few samples
- Deploy solution on your servers behind your firewall
- Support large-scale, multi-server deployments
- Priced per CPU core not per document scanned
- Solution employs standard web browsers and thin clients in Windows® and Linux environments
- No local desktop application to install and manage
- Base system includes machine print (OCR) hand print (ICR) barcode and mark-sense (OMR) advanced recognition technologies
- Solution supports TIFF, PNG, PDF, DOC, XLS, GIF and JPEG image formats
- LDAP and Active Directory integration
- RESTful APIs make ERP, CRM, document management and other back office programs document capture enabled
- Use of open standards and open platform allows customization in multiple programming environments
