COMPANY DESCRIPTION

QualityMaster is a simple and inexpensive solution of quality management systems with a focus on **construction managers**. Construction managers, craftsmen and designers are bound by law to have a certified quality management system (QMS) by an accredited inspection agency and maintain it for a fee. Today, parties can pay for a ready-made quality management system or set up a digital filing system for their work and maintain it themselves. The available Quality management systems in the construction industry are expensive, complex and focused on larger construction managers and their company. We have first-hand experience in how difficult it is to begin making your QMS and using it correctly. Therefore in continuation a master thesis was conducted and market research has been done. It confirms that there is a significant need for a simple QMS and support.

We intend to meet the need of independent construction managers and increase quality in the industrial sector for all.

WHY US?

The team has a great desire to meet the needs and requirements of independent construction managers. We have a background in management engineering, quality management, construction management and more. We have gone through the jungle of making our own QMS from scratch, trying to uphold it without understanding it and finally assisting others by creating a QMS for them.

Our experience and knowledge is a key factor in why we are motivated to bring forth our solution.

We provide a simple user friendly solution made by users.

A simple & cost-effective solution that ensures increased quality of structures

COMPANY MISSION & VISION

All construction managers should be able to use their QMS correctly and *Quality Master* will make that very easy for them. As a result, the quality of construction will rise and therefore the carbon footprint of construction reduced due to less maintenance.

There is an imminent need to support Independent construction managers and smaller contractors. They are not being serviced, despite the fact that various surveys of the last 10 years show a great demand and need for it. Approximately 80% of questionnaires answered yes to whether they wanted ready made QMSs and training for it. This group of construction managers does not have any support when it comes to QMS and they are using it incorrectly as a result.

With GæðaMeistari or Quality Master's software, it will be possible to:

- Increase the **traceability** of work done in structures.
- **Simplify the work** of construction managers in their own QMS.
- Increase **transparency** in structures for property owners
- Increase **customer satisfaction** towards construction managers and craftsmen
- Reduce the number of **Inadequate craftsmen** in the industrial sector

TEAM

Sara Hvanndal Magnúsdóttir - CEO

Management engineer and quality manager, expert in quality management systems in the industrial sector.

Jón Andrés Vilhelmsson - CTO

Electrical technician, construction manager and certified structural designer

Consultants

The team has a strong network and has access to various consultants in various professions. These include: computer scientists, web designers, graphic designers, craftsmen (all trades), construction managers, structural designers, etc.

Unique value proposition

We will support construction managers with the Quality Master system and supply training for the construction manager and its employees. Users will not need to fail the costly and regular functional inspections.

Milestones/Achievements

Market research with interviews with various professionals in the industrial sector were performed in spring 2023. There the need was confirmed. Upcoming milestones are various applications, such as Fræ and Sproti.

Call-to-action and/or financing needs

20 MISK to get started in the software development.
