

RACO Square to Octagon Mud Rings: versatile, time-saving installation solutions

August 15, 2025

When wall depth is uncertain and time is tight, electrical contractors and installers need smart solutions that can adapt on the fly. The new line of RACO® Square to Octagon Mud Rings eliminate guesswork and reduce labor with fast, flexible installation.

These mud rings make it easy to convert any 4" square box into a 3-1/2" octagon opening — ideal for mounting light fixtures, sensors, LED drivers, and other 4" octagon compatible devices.

The Square to Octagon Mud Rings feature a larger opening for increased volume and working space. Angled mounting slots are built to adjust up to 12 degrees to compensate for box misalignment and simplify installation.

Available in four set depths—5/8", 3/4", 1", and 1-1/4", plus an adjustable mud ring with a depth range from 1/2" to 1-3/8", this product line covers a wide range of applications. The adjustable option is especially valuable when wall depth is unknown, helping save time and labor on the jobsite.

Whether you're retrofitting an existing installation or planning a new one, RACO® Square to Octagon Mud Rings deliver the flexibility and ease-of-use installers need.
