PRODUCT ANNOUNCEMENT

Hubbell Expands Cable Protection Portfolio

with Hose Bridges, Ground Protection Mats, and Industry-Standard Compatibility

October 28, 2026

Hubbell expands its cable protection portfolio with 23 new SKUs, giving event organizers, venue operators, and contractors more options to protect cables, hoses, equipment, and site surfaces across a wider range of applications.

The portfolio includes TrukTrak® systems and TredTrak® systems for cable management, as well as new hose bridges and ground protection mats. Hose bridges help protect hoses from pedestrian and vehicle traffic while reducing trip hazards and improving site organization. Ground protection mats create temporary access routes for vehicles and equipment, helping prevent damage to turf, soil, and other sensitive surfaces.

The new products utilize an industry-standard connection system that seamlessly integrates with cable protection systems already in use across job sites and event venues. This gives event organizers, venue operators, and contractors greater flexibility to expand installations, replace damaged components, and deploy cable protection solutions without relying on a proprietary connection design. A backward-compatibility adapter also helps existing users transition to the updated system while continuing to utilize installed legacy Hubbell equipment.

Built for durability in demanding environments, these products are ideal for events, venues, construction sites, and other temporary installations where safety, equipment protection, and site preservation are critical.

Whether protecting power cables at an outdoor event, routing hoses through active work zones, or preventing ground damage from heavy equipment, cable protection solutions help improve site safety, protect valuable equipment, and create more organized environments.

To learn how cable protection solutions can support your next installation, request a quote today.
