Why we ditched Rails
6 lessons we learned the hard way

1. Rails is logical, UIs are not
Views shouldn't be tied to domain objects

2. Preprocessed views won't cut it
View's lifetime is just beginning on page load

3. **Technology stack gets out of hand**

HTML, CSS, JS & JSON

~~Ruby, ERB, SASS, HAML, YAML, CoffeeScript~~

4. Page refreshes *_*
Seriously WTF, look at your smartphone

5. No options for writing modern UIs
JavaScript can't be escaped or superceded

6. **Rails is Ruby**

Ruby != JavaScript

= No Rails :(

For now.
