

Why we ditched Rails

6 lessons we learned the hard way

Repo hosting

Collaboration

Apps & APIs

1. Rails is logical, UIs are not

Views shouldn't be tied to domain objects

2. Preprocessed views won't cut it

View's lifetime is just beginning on page load

3. Technology stack gets out of hand

HTML, CSS, JS & JSON

~~Ruby, ERB, SASS, HAMML, YAML, CoffeeScript~~

4. Page refreshes *_*

Seriously WTF, look at your smartphone

5. No options for writing modern UIs

JavaScript can't be escaped or superceded

6. Rails is Ruby

Ruby != JavaScript

= No Rails :(

For now.
