

How to Apply Revolutionary Contactless Health Tech In Telemedicine

MICHAEL KEEFE

Vice President, Global Sales at NuraLogix, Canada

INTRODUCTION:

NuraLogix is an award-winning, globally recognized medical wellness technology company. As one of Canada's fastest-rising tech companies, our mission is to improve the lives of people across the world through our Affective AI solution.

Affective AI is an intersection between affective computing and artificial intelligence, using our patented technology, Transdermal Optical Imaging (TOI), conventional camera to contactlessly monitor human's physical, physiological and psychological status, such as heart rate, irregular heartbeats, breathing, blood pressure, stress, heart rate variability, BMI, cardiac workload, cardiovascular disease risks, and more.

We provide medical-grade accuracy of our measurement results based on the clinical studies and research publications with our Canadian and global research collaborators in universities and hospitals. NuraLogix also holds eight US patents, including our groundbreaking technology on contactless blood pressure determination, and was recently named Best Biometric Sensor Solution at the MedTech Breakthrough Awards.

With R&D offices in Toronto (Canada) and sales presence in Europe, the Middle East, Africa, North America, and Asia, the company has a strong scientific foundation with over 60 employees including physiologists, psychologists, neuroscientists, data scientists, and software engineers. We have been featured in over 100 international media reports, as well as peer-reviewed papers and publications, including the American Heart Association, Frontiers in Psychology, Scientific Reports, Springer Science, and The International Journal of Clinical Practice
