

Is Non relapse in Addiction/ Suicide a Myth or a Reality?

Dr. Angelica Wagner, PHD

*Physician to Her Majesty Queen Elizabeth, The Royal Family, Chief of Medical Staff Buckingham Palace,
London England, UK*

INTRODUCTION

Over 59% of the world's children are on anti depressant medications. Children 6-13 are Already addicted to ADHD medications are one molecule different than heroin. Suicide is the 3rd leading cause of death in children 10-13 years of age. Relapse in conventional methods of addiction is 95% within two days of leaving treatment. We are in a \$190 Billion dollar mental health crisis. research budgets in Canada only are \$333 Million, Sick Kids budget in Mental Health is \$201.5 Million . Mental health is a serious global problem. As the Covid pandemic ends, the next pandemic of suicide in children and adolescents commences with hospitals already bracing for it.

- 8% of UHNO budget is spent for Brain Trauma, addiction research
- \$36.6 Million
- Sick Kids Toronto, \$22.22 Million Adolescent Addiction
- Adolescent Addiction only \$80.5 Million in the City of Toronto, Ontario, Canada

AIM: Core values of the research were:

1. Change the perception of mental health as a permanent stain on the brain
2. Sustainable, permanent, guaranteed non-relapse results.
3. Natural approach, holistic integrative non-pharmaceutical methods.
4. Shortest possible time frame: weeks not decades for permanent change

Teachable duplicate on of training for global mental healthcare workers struggling for solutions.

METHODS AND MATERIALS: Collapse of the traumas causing the addiction, using DBT, A/C, EFT, etc

1. Auricular electro-acupuncture therapy @ 20 hz on newly discovered addiction points on the ear, leading to a discovery of an eural portal into the brain.
2. Discovery of healing the access of the cranial nerves 3,4,6 for eyes, 5,9,10 for vagus nerve. All participants had damaged eyes, damage to the heart, and damage to the liver due to effects of drugs
3. Replacement of drug therapies with ortho molecular amino acids that were stripped from the brain due to drug use. Brain nutrition, not destructive drugs.
4. Biophotonics at 40 hz frequencies to heal the brain.
5. Essential oils @ 680, 528, and 180 hz frequencies to mitigate fear, anxiety and stress, stepping into faith and courage as the new norm.

RESULTS: 100 formerly incarcerated participants, taken from Los Angeles jail, living in a sober living home in Long Beach, California agreed to participate in a clinical trial to determine if it was possible to:

1. Stop cravings for Meth, Cocaine, Heroin and Alcohol in 1 day or less.
2. 33/35 participants have not relapsed in 7 years. participants in private practice Toronto (alcohol addiction) have not relapsed in 1 year.
3. 2/2 participants in suicidal ideation/ pharma use in adolescents have not relapsed in 4 years and are honour students.

CONCLUSIONS: Holistic sequenced methods of layering hertz frequencies on to the brain create sustainable permanent solutions to addiction, suicide and major brain trauma. Collapsing the physical, emotional or biochemical traumas sets the brain soil for input of good nutrients. The firing of neurons created new neuroplasticity exponent increasing brain potential. A medical clinical trial should be done with before and after fMRI capability for document

In ALL cases the participants radically transformed their lives for the better. Holistic techniques for sustainable non relapse in addiction have already been proven with over a decade of research. Holistic, non- drug therapies using hertz frequencies can be of the therapeutic benefit to create permanent non relapse in addiction and suicide. The solutions are a proven reality with over a decade of evidence.

KEYWORDS:

Stress, addiction, cranial nerves, toxicology, ortho molecular medicine, biophotonics, essential oils, meditation;

BIOGRAPHY:-

Angelika Wagner, PhD is globally recognized as a pioneer in biophotonic holistic research. She is a neuroscientist specializing in innovative methods in mental health, addiction, adolescent suicide, PTSD, and brain trauma. Working with families over a 40-year time-frame, Angelika persevered for

over a decade to accurately sequence hertz frequency solutions that predictably collapse physical, psychological, biochemical and emotional effects of brain trauma in children and adults. Blending psychological strategies of trauma collapse, hertz frequencies of biophotonic therapy, electro-acupuncture, orthomolecular medicine and plant medicines, Angelika creates holistic sustainable results in brain neuroplasticity without the use of drugs. The condition of addiction, previously believed to be incurable and resulting in early death of patients, collapsed.

Core values of this search were:

1. Sustainable, non-relapsing results
2. Natural approach, non-pharmaceutical.
3. Shortest time frame possible
4. Integration of teachable, repeatable trainings of mental healthcare workers
