drax

Choosing the right PPA

Drax offers a range of PPAs to generators. Some offer the security of fixed prices, while others enable greater freedom via flexible arrangements.

Check our guide to PPAs for explanations of terms.

Fixed price

Choose from two options for revenue predictability:

Fully fixed PPA

Your PPA guarantees a fixed price for your power and embedded benefits as a single unit rate. This means you'll know exactly what payments your business will receive.

Fixed price PPA with passthrough embedded benefits

This option pays you a fixed price for every KWh of electricity you sell while also passing through embedded benefits as a fixed percentage.

The value of the embedded benefits will vary depending on your site's distribution region and technology type. At the same time, you'll receive a Renewable Energy Guarantee of Origin (REGO) certificate.

Flexible

A flexible PPA allows you to trade your export power at different times to take advantage of changes in prices on the wholesale market.

Flexible PPAs tend to suit generators that actively monitor the market and are comfortable trading.

System Sell Price

You can choose a PPA that pays you the System Sell Price (SSP) for every KWh of electricity your business sells to the Grid.

You'll receive variable payments depending on when you choose to export your power.

Export tariff

A regulated, all-inclusive tariff that's available to accredited Feed-in Tariff (FiT) generators exporting electricity.

Ofgem adjusts the tariff each April in line with the Retail Price Index (RPI – which measures the change in cost of electricity) inflation rate for the prior calendar year.
