

Trimble Unity Field

A Single Mobile Solution Supporting End-to-End Asset Lifecycle Management

Trimble Unity Field™ is a configurable mobile solution that provides a role-based, GIS-centric and project-centric data collection workflows for digital project delivery and enterprise asset management. This end-to-end mobile application extends the capabilities of the **Trimble Unity** asset lifecycle management solution suite into the field, enabling seamless office-to-field-to-office communication and teamwork.

Efficiency. Accuracy. Ease of Use.

Built with field users in mind, Trimble Unity Field provides a simple user interface and action-driven workflows. Working offline, field inspectors, project managers, contractors and maintenance crews can quickly access the information they need to perform work, capture data and share results with efficiency, accuracy and ease. Rapid syncing provides the data needed to support your organization's analysis and reporting efforts, driving informed and impactful decisions across the asset lifecycle.

Trimble Unity Field is the only mobile application on the market that provides built-in integration with digital project delivery and enterprise asset management software.

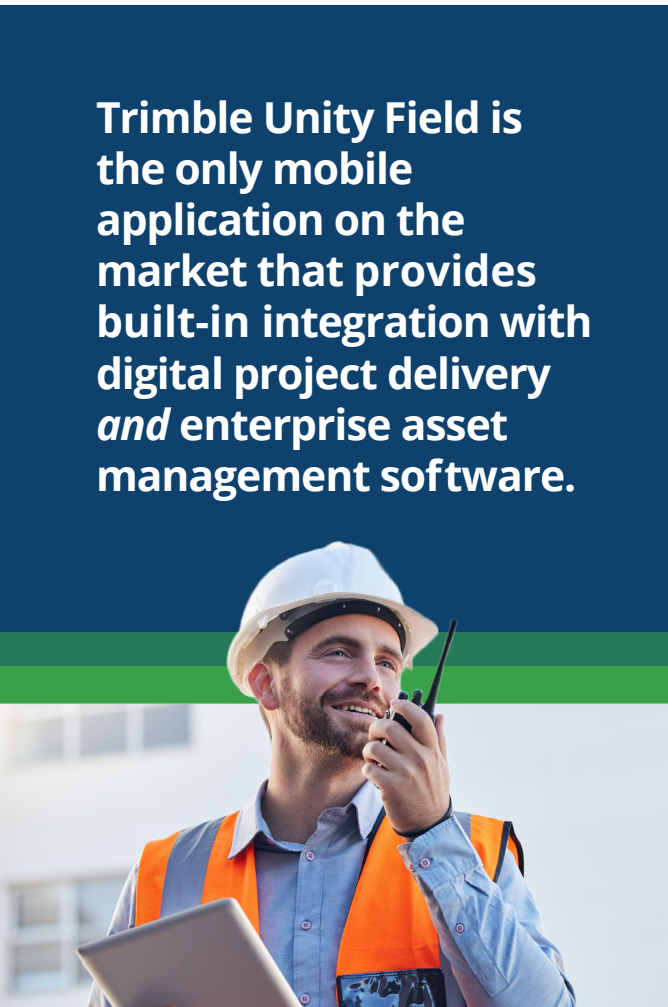

More Value from a Fully Integrated Mobile Solution

Better Decisions in Less Time

- Find assets faster with GNSS capabilities
- Quickly collect GIS location data and supporting attachments
- Ensure consistent, accurate data collection
- Use configured workflows to streamline your processes
- Work offline and sync when connectivity is available
- Eliminate paper processes and handwritten materials
- Get up-to-the-minute project status updates

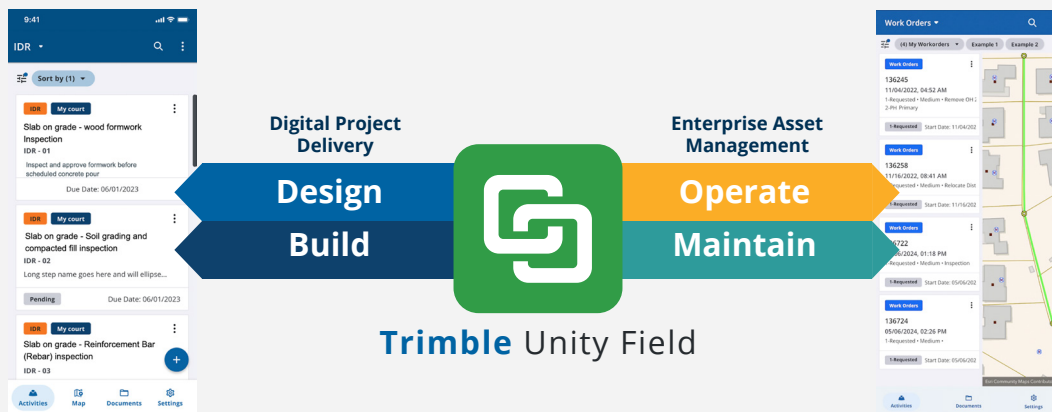

Streamline Administration and Reduce Costs

- Use a single asset lifecycle application
- Survey, design, build, inspect, operate and maintain
- Save up to 40% by reducing travel time and rework
- Simplify administration while reducing costs to your project and IT budgets
- Reduce user training
- Eliminate expensive, difficult-to-maintain customizations with a self-service application
- Use with any mobile device (BYOD: Microsoft, Apple, Android)

A Single Mobile Solution Supporting Digital Project Delivery and Enterprise Asset Management

Built-In Integration with the Trimble Unity Software Suite

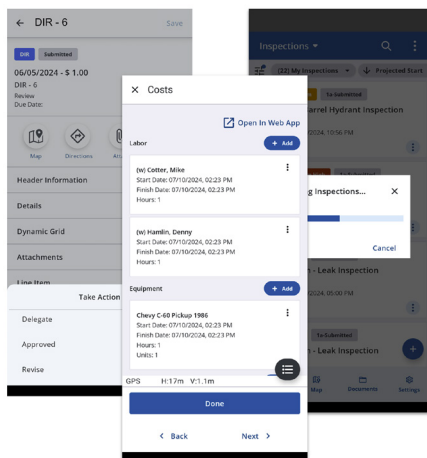

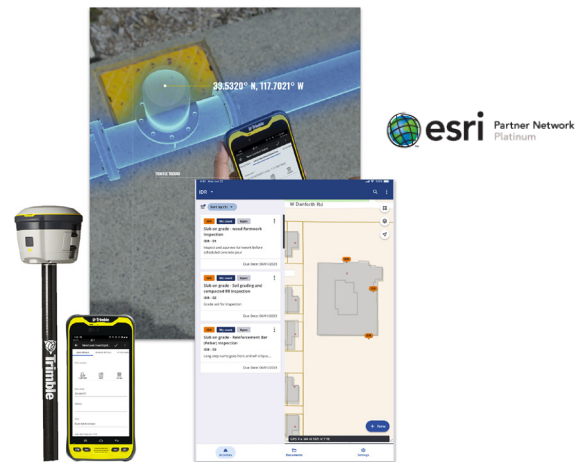

Integrated with Trimble Unity Construct
(powered by e-Builder) for Digital Project Delivery

Integrated with Trimble Unity Maintain
(powered by Cityworks and AgileAssets) for Enterprise Asset Management

Integrated with Trimble Unity Construct™ for Digital Project Delivery

Trimble Unity Field utilizes your configured workflows from **Trimble Unity Construct** for:

- Workflow status monitoring and approval
- Inspection
- RFI and issue management
- Daily reports
- Work assignments
- Drawing view and markup
- Change order management
- And much more

Integrated with Trimble Unity Maintain™ for Enterprise Asset Management

Trimble Unity Field utilizes your configured workflows from **Trimble Unity Maintain** for:

- Inspections
- Service requests
- High-accuracy asset location
- Field data collection
- Work order execution
- GIS-based workflows
- And much more (...)
