

An aerial photograph of a construction site, showing a grid of steel reinforcement bars (rebar) laid out on the ground, ready for a concrete pour. The perspective is from directly above, looking down on the construction area. The rebar is arranged in a precise rectangular pattern, with some sections already partially covered by concrete. The overall scene is one of active construction and infrastructure development.

TAKE ACTION.

Cityworks
A TRIMBLE COMPANY

MONITOR ASSET PERFORMANCE & EVALUATE RISK

As infrastructure assets degrade over time, operation and maintenance costs increase and your customers face negative impacts. Cityworks Operational Insights helps you identify and assess high-risk assets, establish maintenance strategies to increase their lifespan, and prioritize capital improvement projects.

MANAGE CAPITAL IMPROVEMENT PROJECTS

Once you've made the case for an infrastructure replacement project, leverage Cityworks OpX to create a streamlined environment for project management. OpX provides a single place to view related work activities and assets, compare actual costs to estimated costs, track permit revenue against estimated revenue; and quickly access related contracts.

CITYWORKS PROVIDES SCALABLE SOLUTIONS FOR:

Capital Improvements
Condition Assessment
Maintenance & Service
Material Management
Emergency Response

Operations Management
Regulatory Compliance
Reporting & Analytics
Permitting & Licensing
Vehicle & Equipment Tracking
