

SPEC SHEET

Trimble Log Inventory & Management System

SOFTWARE

Empower your operation at every workflow stage

Trimble® Log Inventory and Management System (LIMS) is a suite of programs that provide management control over all phases of timberland, woodland, yard, and mill operations. It combines the features of a log, timber and fiber accounting system with features for silviculture, harvesting, contractor payables, wood or fiber procurement, transportation payments, wood trading or sales, yard or mill inventory management, consumption, and comprehensive reporting and planning tools.

Trimble Log Inventory & Management System

Software

Technical Features			
Contract Management and Payments	Inventory	Silviculture	Transportation
End-to-End Lifecycle: Manages agreements for raw material purchasing, harvesting, transportation, and final sales.	Comprehensive Tracking: Manages loose, banded, tagged, sorted, and bulk log inventory across physical locations like yards, decks, or piles.	Specialized Contracting: Supports diverse contracts for silviculture and infrastructure, such as aerial photography and road construction.	Multi-Modal Support: Tracks diverse transport configurations, including truck, railcar, and barge.
Compliance & Validation: Utilizes flexible business rules and data validation to ensure regulatory compliance and financial accuracy.	Detailed Volume Capture: Automatically tracks volume data for incoming loads, internal transfers, sales, and consumption.	Document & Financial Automation: Generates boilerplate or custom contracts, processes invoices against signed agreements, and automates financial system entries.	Compliance & Licensing: Manages critical vehicle data such as ownership, licensing, and registration details.
Advanced Load Settlements: Supports formula-driven rates, fuel adjustments, haul cycle times, and quality-based bonuses or penalties.	Flexible Attribute Management: Allows for the custom definition of inventory attributes to suit specific operational needs.	Operational Inventory Tracking: Manages the procurement and consumption of materials like herbicides and road-building supplies.	Load Monitoring: Identifies and flags overweight conditions, associated fines, and light (underweight) loads to optimize haul efficiency.
Complex Payables: Streamlines multi-party arrangements (prime/sub-contractors) including advances, holdbacks, and alternate-payee recoveries.	Dual-Layer Inventory: Synchronizes physical location tracking with accounting inventory using various valuation methodologies (cost, lower of cost to market, etc.).	Payment Integration: Facilitates seamless payments and accounting synchronization for all specialized contracted services.	

Connected Programs	
Program	Capabilities
WeighWiz	Automates scale data capture and LIMS synchronization for seamless payment and reporting. Supporting attended or unattended modes and single/dual platforms, it features barcode scanning, image capture, and robust data validation for a wide range of scale indicators. A dedicated mobile app also enables drivers to manage weigh-ins directly from the cab.
LabWiz	Captures quality, moisture, and contaminant test results for chips and biomass, provides easy and intuitive lab operations flow with support for trays and barcode scanning, supplying this data to LIMS for payment and inventory calculations. Integrates with size analyzers and moisture readers.
LoaderWiz	A mobile app that synchronizes bidirectionally with LIMS to manage load creation in the forest (electronic bill of lading) and simplify data entry process while ensuring its accuracy.
ScaleWiz	A mobile log yard application used to scale logs for volume and quality attributes used for payment.
EazyWiz	A mobile app for configuring simplified data entry layouts and capture and integration of the data with LIMS.
