

Civil Construction Operations Solution

Resource scheduling and dispatching, performance tracking, and a common data environment

The Trimble® Construction One Civil Operations Solution gives contractors industry-leading applications for critical operational workflows and the ability to connect them in real time.

Replacing paper, spreadsheets and niche applications with specialized, online tools, makes it easier to get the right resources to the right place at the right time, record accurate performance data in real time and collaborate on timely, data-driven decisions that keep projects profitable.

Contractors can also move from manual paper-based forms management to a mobile-based digital forms solution to record and report on vital data with ease and immediacy.

Trimble Connect® adds a cloud-based data environment (CDE), making it easier to see and share documents, collaborate in real time and make data-driven decisions.

What's Included

- **B2W Schedule** for resource management
- **B2W Track** for performance tracking and analysis
- **Trimble Connect** supports a common data environment
- **Connected Workflows** streamline processes across Trimble office and field solutions
 - Vista and Spectrum for sharing up to date field cost and production data
 - WorksManager for scheduling and managing field device assets
 - Siteworks for automating progress quantity measurements
- **B2W Field View** add-on solution syncs with the operations database for easy digital forms creation and analysis

Benefits

Optimize every resource

Plan for maximum efficiency and adjust with real-time agility with a centralized, online application for scheduling and dispatching.

Capture better performance data

Customize electronic logs to make it fast and easy to record productivity, labor and equipment hours, material use and other data for crews and individual employees.

Make immediate, data-driven adjustments

Use daily reporting on performance versus plan to keep projects on schedule and budget.

Collaborate with confidence

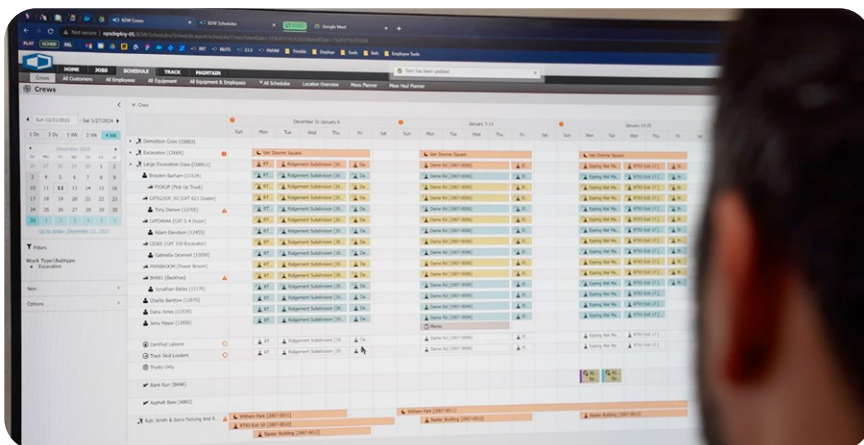

Connect people, projects and data in real time with a cloud-based common data environment.

Eliminate paper

Adopt digital forms to better manage inspections, toolbox talks, safety check lists and other processes to capture richer data in real time and enable powerful reporting.

Simplify technology deployment

Trimble Construction One subscriptions reduce technology costs and complexity while ensuring easy access to continuous updates and 24/7 support.

Civil Construction Operations Solution

Resource scheduling and dispatching, performance tracking, and a common data environment

B2W Schedule

This centralized, online solution replaces whiteboards, spreadsheets and other disconnected tools, enabling coordinated scheduling and dispatching of employees, crews, equipment, materials and trucking across job locations and over time. Role-specific visibility and access allow employees throughout a company to communicate and collaborate in real time to get the right resources to the right location at the right time.

B2W Track

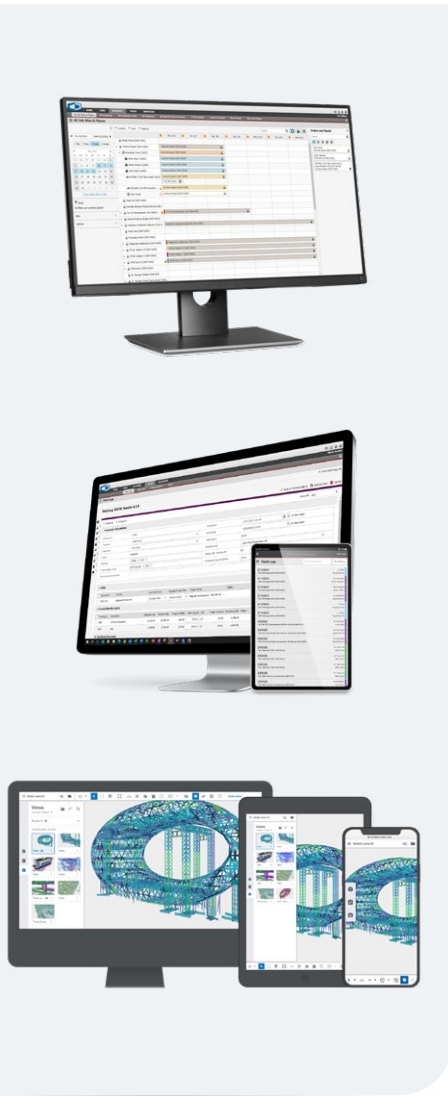

Through customized electronic field logs, B2W Track streamlines collection and reporting of field progress, including productivity, labor hours, materials and equipment utilization. Daily analysis then empowers contractors to adjust operations more accurately and immediately. Employees in the field also use B2W Track to communicate resource requests directly to the B2W Schedule application.

Trimble Connect

Trimble Connect is a Cloud-based data environment (CDE) that connects construction professionals to the right data at the right time for more informed decision making and enhanced project efficiency. Stakeholders across workflows and throughout the plan, design, build and operate phases of a construction project use Trimble Connect to share, review, coordinate and comment on vital documents in real time.

B2W Field View (add-on)

B2W Field View generates reports, dashboards and alerts from electronic forms, delivering timely, accurate data to improve operational performance, safety and quality. Easy creation and management of customized forms enable contractors to replace inefficient paper-based processes and capture richer data in real time anytime, anywhere and on any device.

Trimble Construction One

Industry-leading solutions that work together to connect people, equipment, workflows and data across all phases of construction.
