

ProjectSight

Construction Project Management Software for the Teams That Build Our World

Empower construction teams to build better with the Trimble® ProjectSight™ solution. Take command of projects with actionable data and powerful collaboration.

Improve collaboration across your business with ProjectSight's connected workflows across Trimble solutions from accounting, BIM, fabrication and reality capture.

Explore ProjectSight's capabilities across financials, documents, records and the field.

Budget, Cost and Change Management

Budget, Costs and Forecasting

Get detailed, actionable insights into project budgets, costs, and forecasts. Track performance and make informed financial decisions by comparing original to projected expenses.

Contracts

Track agreements and their schedule of values. Commitments and changes are automatically updated in the project budget.

Change Orders

Streamline change order management from identification, approval and impact. Track potential changes, manage subcontract and prime contract adjustments, providing comprehensive visibility into financial and schedule impacts.

Application for Payments

Request payment for the completed work for each cost period.

Purchase Orders

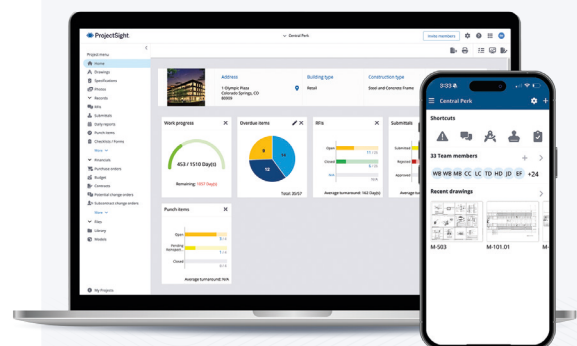

Track materials, equipment, and supplies that are purchased from vendors.

Invoices

Record and process invoices from project stakeholders, change orders or other sources.

Benefits

- Eliminate rework from outdated information.
- Take control with centralized drawing and document management.
- Access project data to keep building, even when offline.
- Keep project stakeholders accountable with a complete audit trail.
- Control your bottom line with powerful change and cost management.
- Simplify collaboration with connected workflows to Trimble software and hardware.

Construction Project Management Software for the Teams That Build Our World

Drawing & Document Management

Drawings

Simplify drawing management with time-saving, AI-powered upload. Markup drawings or link RFIs, punch lists, and changes directly to drawings.

BIM

Eliminate uncertainty and save time with 3D models. Collaborate easily between office and field with status tracking, dimensioning, and shareable views.

Photos

Consolidate photos from across the project team, make them actionable and referenceable. Attach photos to daily reports, issues, drawings, RFIs and more.

RFIs

Create and manage RFIs with all the details—photos, drawings, and BIM—included. Get the answers you need to stay on schedule by tagging responsible stakeholders and assigning due dates.

Submittals

Streamline the entire submittal process from creation to approval. Easily track progress through approvals so teams can get building faster. During construction, access approved submittals from the office or the field.

Specifications

Organize specifications, manage revisions, and link spec sections to other key project records like submittals or RFIs.

Action Items

Keep track of follow-up items that do not fit into other categories. Assign responsibility and due dates to them, track their status, and follow up on them.

Meeting Minutes

Manage topics, invitations, and notes for your meetings. Create a series of related meetings and carry forward any outstanding topics as needed.

Transmittals

Create a log of written communications or generate transmittal cover sheets for important documents.

Issues

Log, track and resolve issues which do not fall into other categories. When necessary, escalate issues to other records like RFIs or Change Orders.

Field Productivity

Daily Reports

Record each day's activities in one place. Track labor, equipment usage, general notes or upload photos and videos. Weather can be tracked automatically based on project location.

Punch Lists

Assign punch items, attach photos and link drawings. Items can be grouped, sorted and filtered.

Checklists

Create custom checklist templates to conduct field inspections of all kinds. Checklist templates are fully customizable, allowing your team to track work performed or track other critical items.

Field Work Directives

Handle unexpected events, account for additional work or provide clarification.

Notices

Formally notify project stakeholders of issues relating to workmanship, safety or unfulfilled contractual obligations.
