

A TRIMBLE COMPANY

B2W Employee App

for iOS and Android

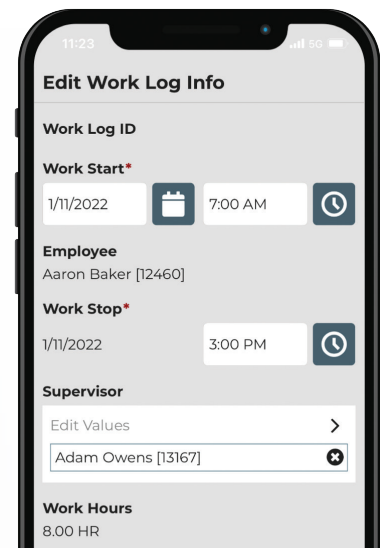

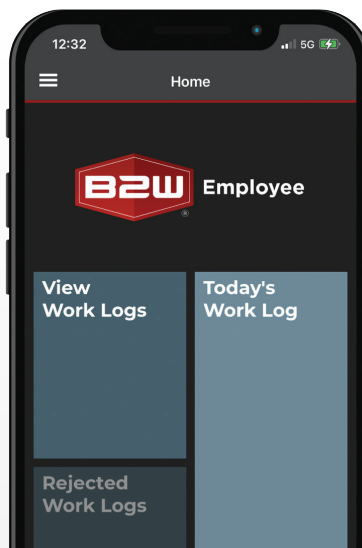

TIME AND PERFORMANCE TRACKING FOR INDIVIDUAL EMPLOYEES

TRACK EMPLOYEE HOURS AND DATA INDEPENDENT OF FIELD LOGS

- Create individual work logs easily on iOS and Android devices
- Record and report labor hours, equipment utilization and production quantities
- Submit for review, approval and export to accounting via B2W Track

Tracking labor hours, productivity and equipment utilization for individual employees is a challenge across heavy construction sectors, especially when those employees work independent of crews and supervisors. The B2W Employee App gives contractors a simple, mobile solution for recording and reporting this vital data and for aggregating it with similar data from their crew-based employees and projects for analysis.

Simple, accurate data capture on individual work logs

The B2W Employee App makes it easy to create and complete individual work logs, so contractors can track critical data as work is being performed. Individual employees use the app on mobile phones or tablets to record their labor hours along with associated projects and tracking accounts. They can also enter hours for equipment used and production quantities for work performed. Notes can be added to the work logs, and configurable fields can be created to meet business-specific requirements like recording weather conditions, safety compliance or other information.

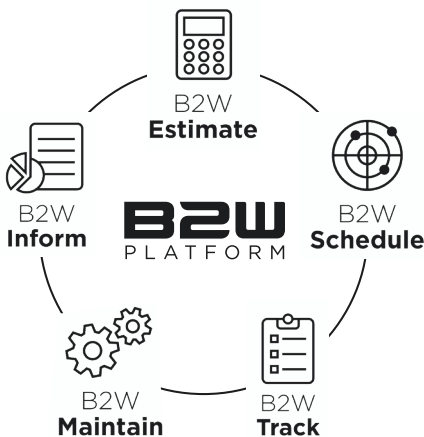

A TRIMBLE COMPANY

KEY FEATURES

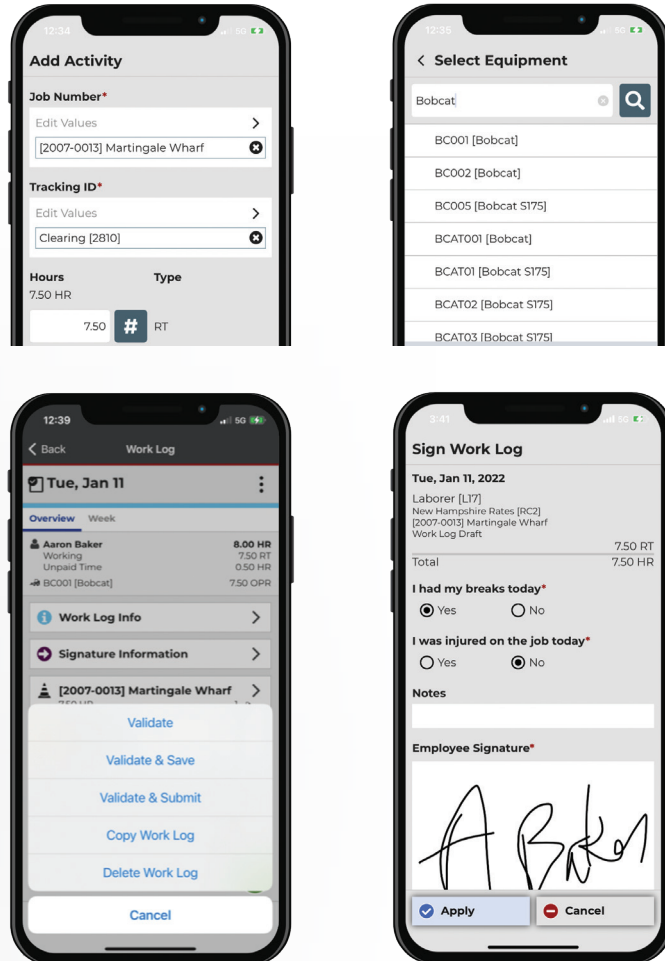

- Configurable fields for business-specific data
- Clock in/out with “time stamps” for the start and end of the work day
- Geolocation capture with geofence matching to validate job site or other work place
- Equipment meter readings
- Employee sign-off via electronic signatures
- Built-in review, submittal and validation workflow
- Comprehensive reporting on data from individual work logs and crew field logs
- Direct transfer of approved labor hours to payroll systems via B2W Track

B2W Software empowers and inspires heavy civil construction companies to win more work and complete it more profitably. The company's unified platform connects resources, workflows and data and includes applications to manage estimating, scheduling, field tracking, equipment maintenance, data capture and business intelligence.

An easy system to manage and use

Contractors manage and control access to the B2W Employee App easily through the B2W Track administrative area. Labor hours from B2W Track field logs and from work logs created by the new mobile app are visible in a centralized location. From there, administrators and supervisors with appropriate credentials can review, approve and analyze hours and transfer data directly to accounting systems for payroll processing.

Individual employees can create work logs with the app, or the logs can be created by administrators. Previous work logs can also be copied to save time in initiating new logs. The app includes a built-in workflow for electronic employee sign-off, submittal and validation. Employees can use the app in a real-time, online mode or they can create and modify work logs offline and send them to a server when a connection is established.

Comprehensive, unified reporting and analysis

The B2W Employee App complements field logs in B2W Track, giving contractors unified capabilities for collecting and analyzing data from individuals and from crews on job sites. B2W Track is used to record labor hours for crews along with production, material and equipment utilization, and other information with electronic field logs. Data from those field logs and from individual work logs can be aggregated to generate comprehensive and immediate reporting on project status according to tracking accounts.
