

Civil Construction Equipment Maintenance Solution

Maintenance process management, preventive programs, inspections and reporting

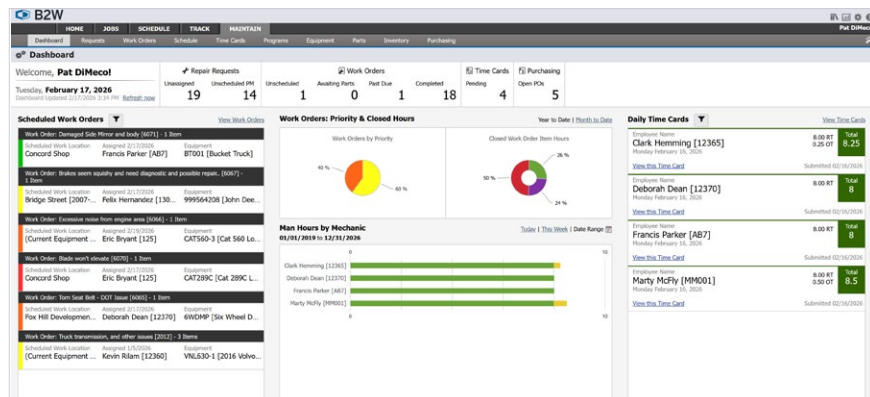

Keeping equipment on the job and performing properly commands a substantial chunk of heavy construction operating budgets. The Trimble® Construction One Equipment Maintenance solution minimizes direct maintenance costs along with the expense and disruption of equipment downtime.

The B2W® Maintain computerized maintenance management system (CMMS) efficiently manages equipment maintenance and preventive programs with real-time access to equipment status and repair history. It offers flexible features for user-defined preventive maintenance and managing repair requests, work orders, parts, and labor management. Real-time visibility enables contractors to schedule and complete maintenance work with maximum efficiency, while KPI tracking and reporting support informed decisions on maintenance operations, staffing, and asset investments. Additional features include automated warranty tracking, inventory control, integrated parts purchasing, and third-party telematics data integration.

Cut equipment repair costs and increase uptime through automated preventive maintenance, streamlined processes and data-driven decisions.

Connected Workflows

The Trimble Construction One Civil Equipment Maintenance Solution connects with B2W scheduling and field tracking applications for real-time communication of repair requests, maintenance scheduling and dispatching across workflows.

Benefits

Cut costs and downtime

Manage inspections, preventive maintenance, repair requests, work orders, parts and labor with maximum efficiency.

Proactively prevent repairs

Set up maintenance programs and automate notifications to complete preventive work at the right intervals to cut costs while improving uptime, safety and the lifespan of equipment.

Make better decisions

Track maintenance KPIs with easy access to consolidated equipment data and extensive reporting and dashboards.

Maximize mechanic efficiency

Give mechanics a mobile tablet application to see schedules, process work orders, access documentation and submit timecards.

Simplify technology deployment

Trimble Construction One subscriptions reduce technology costs and complexity while ensuring easy, secure access to continuous updates and 24/7 support.
