

Improve Pedestrian Safety and Traffic Flow by Managing Signals and ITS Lifecycles

Signal and ITS Manager is a GIS/LRS-integrated enterprise software that helps you keep signals and ITS assets working optimally—saving money and time while also saving lives.

With Signal and ITS Manager, You Can:

Streamline Workflows

Integrate the planning, inventory, inspection, analysis, and maintenance of the full asset lifecycle in a single workflow.

Consolidate Inventory

Manage all your ITS assets in one place, including video and number plate recognition cameras, variable message signs, and information signs.

Visualize Data

Search and display location, condition, and maintenance activities for any asset in a map for better visibility.

Make Better Decisions

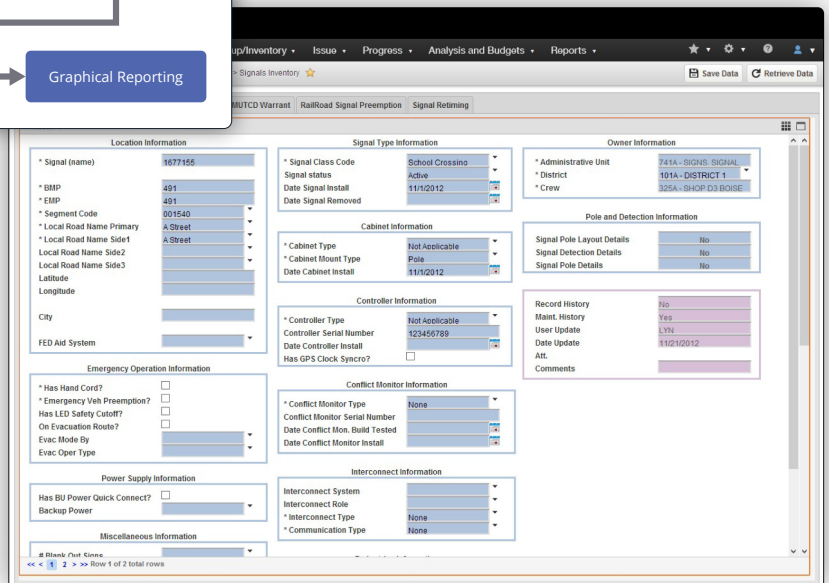

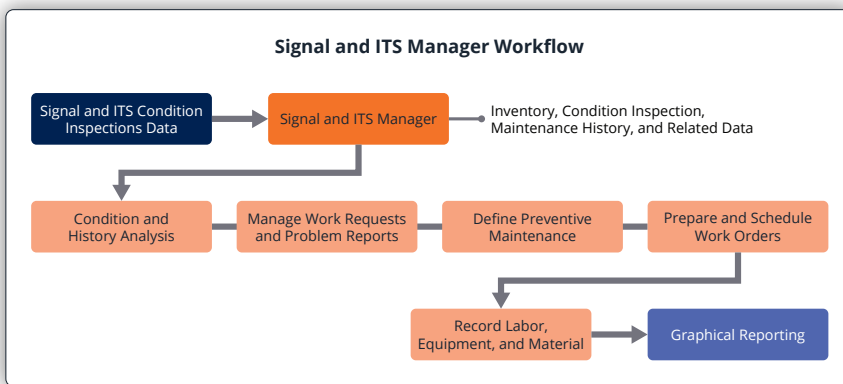

Use advanced analytics to allocate resources efficiently, eliminate redundancies, and reduce costs.

 **SaaS Solution**

Fast deployment • Strongest security • Seamless updates • Highest performance

Features and Benefits

- **Asset Inventory and Data Collection** – Achieve systematic collection of sign inventory and data.
- **Asset Condition and History Analysis** – Make better business decisions with superior condition and history analysis.
- **Asset Hierarchy** – Define signal asset hierarchies to simplify maintenance and analysis activities.
- **GIS/LRS Search and Visualization** – Quickly display condition, location, and maintenance activities for your signal and ITS assets.
- **Preventive Maintenance** – Optimize and customize your maintenance process for each asset type.
- **Workflow Customization** – Customize your team's workflow to meet your agency's business requirements.
- **Work Requests** – Configure workflow for work requests and create work orders.
- **Work Orders** – Seamlessly move work from annual plans and problem reports to actual work orders.
- **Graphic Scheduling** – Simplify and accelerate work order scheduling using graphic tools.
- **Labor, Equipment, and Material Management** – Increase the accuracy and efficiency of recording labor, equipment, and material usage.

Manage inventory using logical, easy views.
