

# Estimation MEP

Your all-in-one estimating solution in the cloud  
Estimating - Takeoff - Pricing - Labour - Collaboration

Complete estimates faster and with more confidence — straight from your web browser.

# Stop guesstimating, start estimating your small MEP projects!

Just what you need to efficiently build an accurate estimate, Estimation MEP from Trimble helps small to midsize MEP contractors win more work profitably and predictably. This easy-to-use estimating software combines document storage, graphical takeoff, material pricing and labour, and supplier pricing in one, fully-integrated solution, so you can complete your estimates faster and with more confidence — straight from your web browser. Plus, collaboration and connected workflow capabilities offer added value and streamline processes for a greater return on your investment.

## “ Estimation MEP is perfect for us”

“Estimation MEP is perfect for us as we don't need to install anything to get started. I can safely and securely store my drawings in the cloud and not have to worry. We can easily perform take-off, search for content and churn out accurate estimates quickly!

- Gerard Flynn, Contracts Manager at Shane Mechanical Ltd

Error-free estimating has  
never been faster or easier!

### **Simplify for more success**

Say goodbye to spreadsheets and switching between multiple, standalone applications. With intuitive workflows, faster takeoff — featuring Auto Count with patented secondary search functionality — and material pricing and labour all available in one application, you can create faster, more accurate estimates and get more bids out the door.

### **Build estimates, not your database**

Built on Trimble's industry-leading content, Luckins, Estimation MEP delivers a fully-managed item library with material pricing and labour, plus thousands of out-of-the-box assemblies — so you don't have to.

### **Bid with confidence**

Reduce the chance of costly errors and increase accuracy with the fully linked graphical takeoff, up-to-date pricing on hundreds of thousands of items, and more.

### **Make handoffs a breeze**

The Trimble Connect collaboration platform lets you store and share project data for easier coordination. Plus, connected workflows help you use estimate data beyond the initial bid to improve productivity and profitability.

### **Work the way you want**

Whether on a PC or a Mac, in the office or on the go, Estimation MEP is designed to fit your work style. Plus, cloud and shared access make it easy to collaborate with teammates, all from a web browser, whenever and wherever.

### **Work securely**

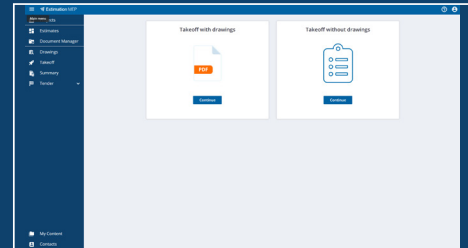

Estimation MEP is ISO 27001 certified, giving you the confidence that your data is secure without additional IT resources or needing to install updates.

# Leverage connected workflows to streamline your business

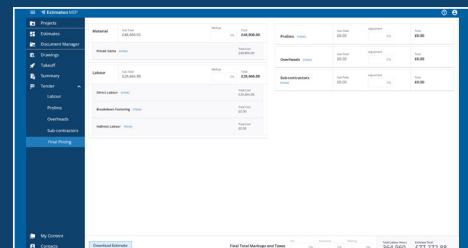

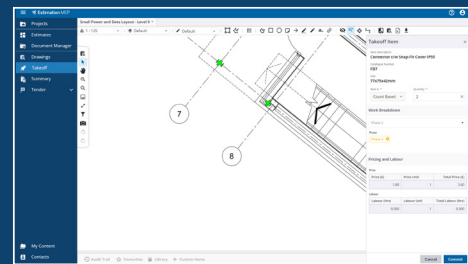

## Direct supplier pricing and procurement

Fully integrated with Estimation MEP, Supplier Xchange provides up-to-date material pricing directly from your suppliers - in real-time. Simply apply those prices to your estimates to ensure you have the best, most accurate pricing for bid submittals. To save even more of your precious time and further reduce the chance of data entry errors, once you've won the bid, you can purchase materials directly from that same bill of materials using the Supplier Xchange procurement workflow.

## Project coordination

Included with your subscription and integrated with Estimation MEP, Trimble Connect is an open collaboration tool that connects the right people to the right data at the right time on any device - enabling informed decision-making and enhancing project efficiency. Projects created in Estimation MEP are immediately available in Trimble Connect, enabling sharing of detailed data, and simplifying coordination among stakeholders for better project outcomes.

# Get up to speed fast

Designed specifically for the workflows of smaller MEP contractors, Estimation MEP emulates the familiar takeoff sheet estimators have traditionally used. This eliminates the need for hours of software training and minimises the learning curve so you can start estimating in no time – even if you've never used estimating software. Plus, guides and resources are available directly in the application, helping you to quickly get the information you need to keep your workflow moving without interruption.

# Key estimating details

## Managed item library and assemblies

Estimation MEP comes complete with a catalogue of hundreds of thousands of MEP items – most with list prices from the industry's leading source, Luckins – plus thousands of out-of-the box assemblies.

## Custom items and assemblies

Create and edit items and assemblies when you need them. Customise items and assemblies within an estimate or easily build out your own assembly database using the integrated assembly builder.

## Labour and labour factoring

Create a detailed labour estimate by leveraging the included Luckins set of labour units. Factor your labour hours by drawing and by work breakdown structure to meet your company's unique needs.

## Seamless, integral graphical takeoff

Eliminate paper, speed up takeoff and eliminate data entry errors. Graphical takeoff works seamlessly with estimating – all in one application – so your estimate is always up to date.

## Summary

Estimation MEP automatically consolidates the items from multiple takeoff sheets and allows you to make any additional changes to material pricing or labour hours in this summarised view.

## Quote management

Estimation MEP compiles quotes from vendors and subcontractors as they come in to help you make the best decisions so you can gain a competitive advantage and reduce the chaos of bid day.

## Bill of material (BOM)

See and export your entire list of material in your estimate in one view and group the data by work breakdown, manufacturer or floor for procurement, scheduling and project management purposes.

## Bid closeout

Manage labour rates and add cost items like prelims and overheads, overheads and subcontractors to your estimate. Add tax, overhead and markup to calculate your final number as accurately as possible.

## Join over 80,000 Trimble MEP estimating users

Users of Trimble MEP's solutions range from small MEP design and contracting companies to large global engineering practices.

## Trimble MEP

Trimble MEP delivers sophisticated solutions that transform workflows from the office to the field. The Trimble Constructible Process allows specialty trades to build beyond BIM to automate fabrication and fieldwork with reliable construction data. With access to the largest library of manufacturers content and a broad portfolio of hardware and software solutions, Trimble optimises the entire design, build, and operate lifecycle.
