

Trimble Land Resource Manager

SOFTWARE

Develop your
single source of truth

Trimble® Land Resource Manager (LRM) provides the definitive data source for the forest and other assets. Manage activities, schedules, progress, and associated costs needed for effective decision support, resource planning, compliance, and quality reporting.

Trimble Land Resource Manager

Software

Features and Capabilities	
DATA EDITING	
Business rules (data and spatial)	Standardise how data is captured by enforcing rules for what users can add, change, or remove, including location-based rules on the map.
Workflow actions	Run one-click actions on selected records to speed up common operational tasks (configured to match your workflows).
Create, update, and delete records	Add new records, edit existing ones, or remove records directly in grid and form views, with changes saved back to LRM as your system of record.
WORKING SETS AND COLLABORATION	
Bulk updates and importing	Update a field across many selected items in one step, for example setting status, assigning a contractor, or applying the same value to a working set. Quickly import data using built-in spreadsheet import wizards.
Favorites	Save shortcuts to the views and locations you use most, including working sets, saved searches, and map bookmarks.
Sharing	Share “working sets” and saved searches so teams can work from the same, up-to-date set of results.
Offline	Take LRM’s data into the forest with our companion mobile app.
MAP AND SPATIAL WORKFLOWS	
Advanced map editing	Edit geometry with tools such as split, merge, and reshape, while keeping related data and attributes aligned.
Spatial overlay analysis	Overlay spatial layers to calculate outputs such as Net Forested Area and other area-based metrics..
Snapping	Create accurate features by snapping new geometry to existing managed layers and base mapping.
Powerful integration	Deep integration with Esri - the industry standard for GIS, and the rest of the Trimble Forestry suite.
SEARCH	
Advanced search (search plus)	Build more complex queries across multiple record types using AND/OR logic to find exactly what you need.
Quick search/filtering	Find matching records quickly with in-grid search and filtering, including across hidden columns, with highlighted matches.
Saved searches & sharing	Save your search criteria for reuse, and share those saved searches with others.

Device Support

Supported browsers

- Google Chrome (latest 2 versions)
- Microsoft Edge (Chromium-based)
- Safari (Mac)
- Firefox (latest ESR)

Available languages

English, Finnish, French, German, Portuguese (BR), Spanish, and Swedish.
