

Trimble Logistics Operations

SOFTWARE

One platform to plan, execute,
track and validate

Trimble® Logistics Operations software is a forestry logistics execution platform that manages the movement of timber from the forest to the customer. It connects production, transport, and delivery into a single system with strong data validation and real-time visibility. Scale to fit your needs - from small contractors to large, multi-region forest owners through driver, loader or dispatch led execution.

Trimble Logistics Operations

Software

Functionality			
Electronic Ticketing & Data Validation	Inventory Visibility	Mapping, Tracking & Geospatial Intelligence	Delivery Planning & Execution
Electronic and paper tickets with photo OCR	Real-time stock by pickup point and grade	Live GPS tracking and breadcrumb history	Calendar and drag-and-drop journey planning
Ticket hand-off by QR code, Blue-tooth or mobile printer	In-forest stock updates from loader tablets, online or offline	Geofencing: automatic arrival status, loader alerts	Customer weekly delivery targets by grade with plan-versus-actual tracking
Automated ticket validation; 90–95% of loads pass with no manual input	Weekly production (uplift) planning by crew and grade, with progress against target	Site turnaround and cycle-time analytics by location	Fleet utilization tracking and analysis
Reconciliation with weighbridges, LIMS and invoicing systems	Stock movement performance and inventory analytics	Trimble Maps integration with traffic, weather and incident overlays	Driver-, loader- or dispatch-led, from simple ticketing to full planning
Load traceability for chain of custody and EUDR	Driver visibility of truck activity at pickup locations	Trip playback with loaded vs empty km and hours	Real-time event monitoring and exception handling

Additional Features	
Feature	Description
Incident Reporting & Photo Capture	Configurable field events (road conditions, downtime, safety, incidents) with up to 10 geotagged photos each; events can raise alerts or place holds.
AI Assistant	Ask questions in plain English across journeys, stock, tickets, deliveries and live tracking and get analysis, not just lookups. Read-only, scoped to each user's permissions.
Reporting APIs for Custom Reporting and Dashboards	Access operational data through APIs to build custom reports and dashboards, enabling deeper insights and seamless integration with enterprise systems.
Planning Optimization Engine	Automatically plan journeys against real-time stock, customer demand and fleet availability, using configurable constraints and priorities such as shortest haul or on-time delivery.
True ETAs	Provide accurate, real-time arrival estimates based on live conditions, improving coordination, reducing wait times, and enhancing customer satisfaction.
Reporting & Scheduled Exports	200+ role-based reports for contractors, drivers, forest owners, mills and operations managers, with scheduled CSV/PDF delivery by email.

Device Support

- Supported browsers
- Google Chrome (latest 2 versions)
 - Microsoft Edge (Chromium-based)
 - Safari (Mac)
 - Firefox (latest ESR)

- Supported mobile operating systems
- Android 7.1.1+ (10+ recommended)
 - iOS 15+
 - Offline-capable; syncs on reconnect
