

UNIFIED...

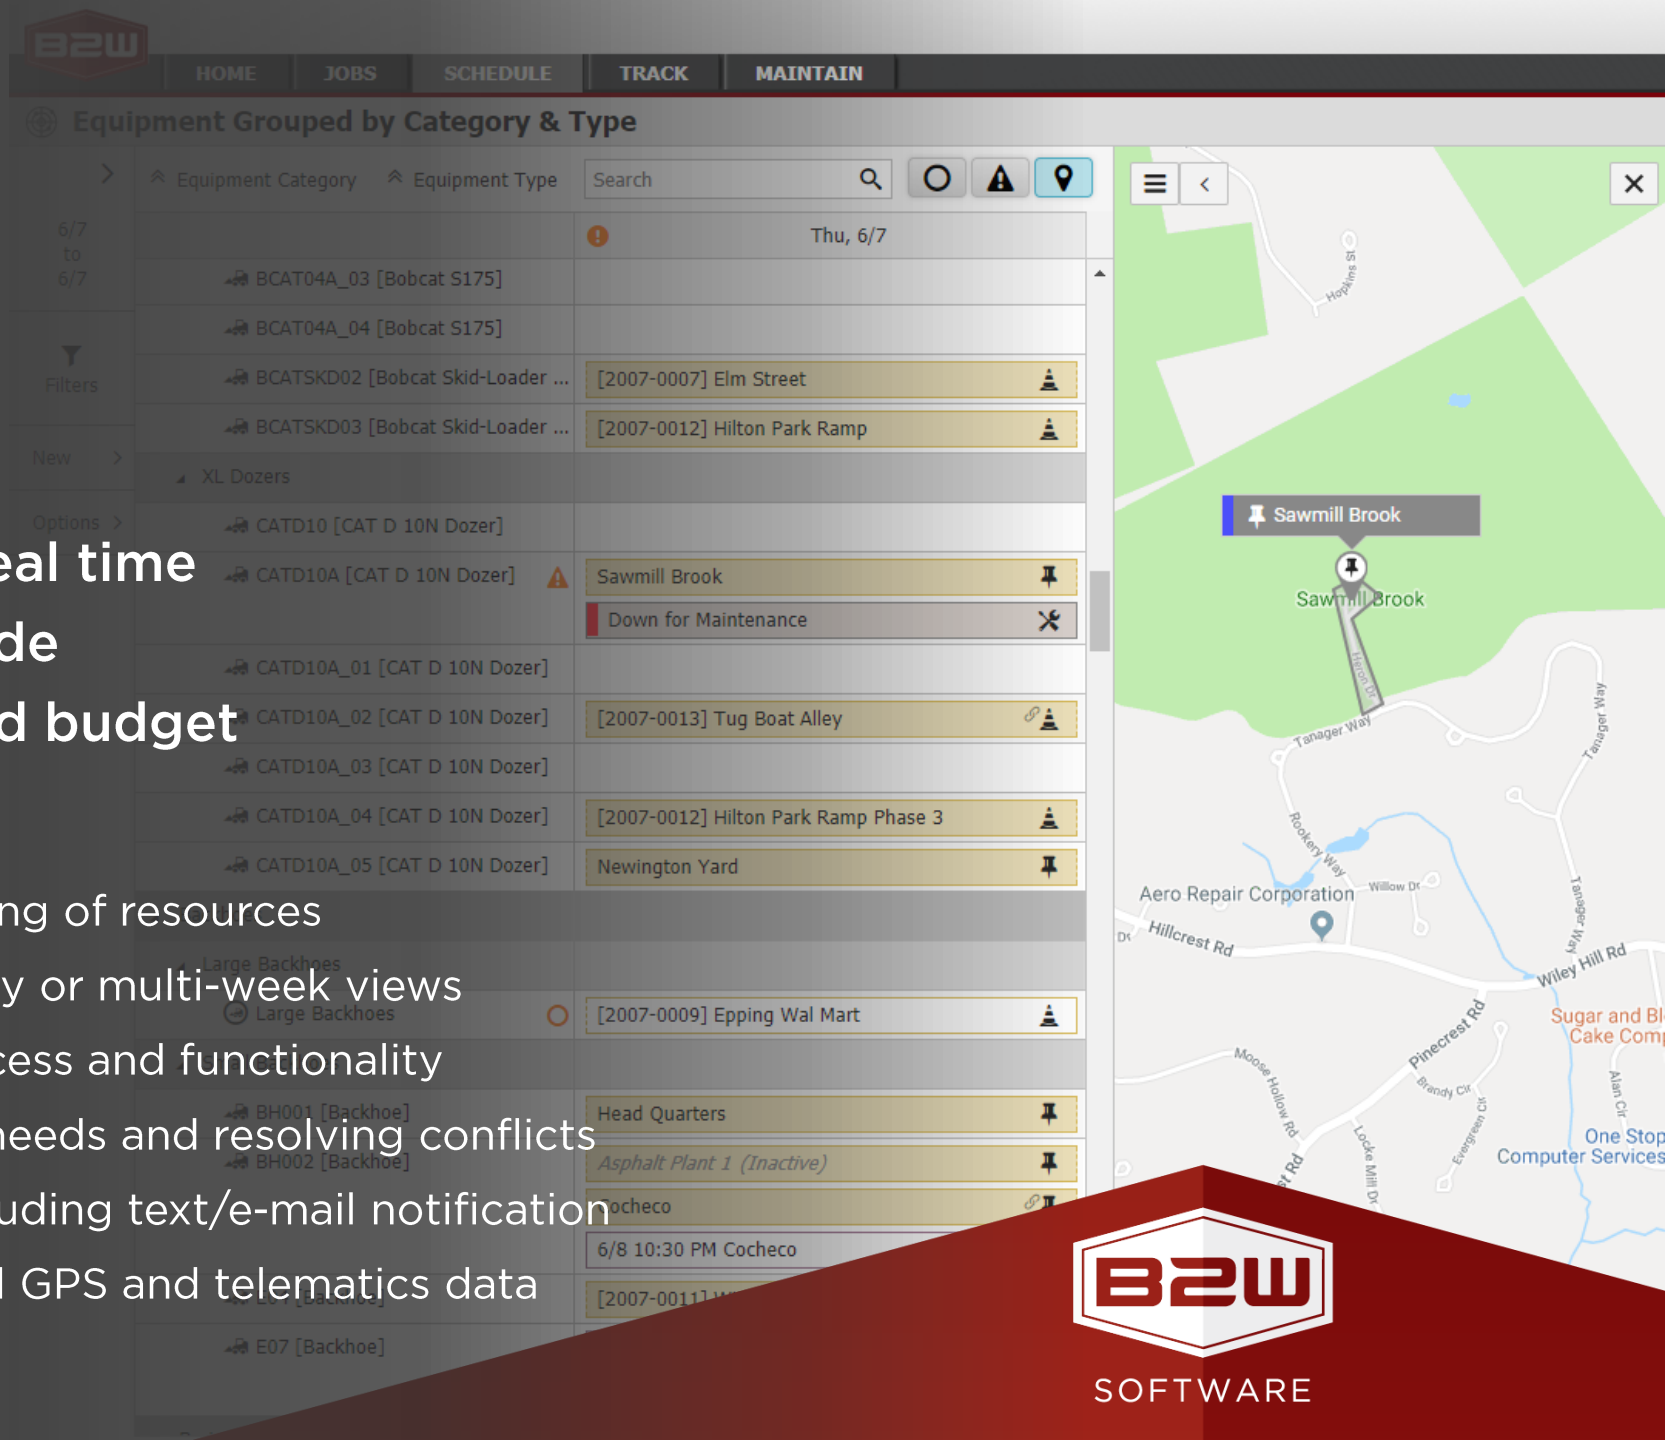

Contractors using B2W Track extend the advantages by adding B2W Schedule. This combination gives field and scheduling/dispatching teams real-time visibility and connectivity to optimize resources.

- Resource needs created in B2W Track are visible and actionable in B2W Schedule - instantly.
- B2W Track users see available and assigned resources in B2W Schedule in real time.
- Assignments from B2W Schedule can be used to create field logs in B2W Track automatically, including jobs, foremen, employees and equipment.
- B2W Track and Schedule use ONE unified database for job, employee and equipment lists - eliminating errors and redundant data entry.
- Reports exposing B2W Schedule assignment hours against hours reported in B2W Track help to maximize utilization.

Coordinate resources in real time
Collaborate enterprise-wide
Keep jobs on schedule and budget

- Centralized, online solution
- Real-time viewing and assigning of resources
- Customized one-day, multi-day or multi-week views
- Mobile tablet and desktop access and functionality

B2W Schedule
RESOURCE SCHEDULING & DISPATCHING SOFTWARE

OPTIMIZE RESOURCES TO KEEP PROJECTS ON BUDGET AND ON SCHEDULE

- Coordinated, collaborative scheduling and dispatching across workforces
- One, unified system
- Real-time, enterprise-wide visibility and access
- Mobile tablet and desktop functionality

B2W Schedule replaces the disconnected mix of spreadsheets, phone calls, whiteboards and messages with a single solution for coordinated, collaborative scheduling and dispatching of resources across locations and over time. Individuals manage scheduling based on their area of responsibility. Users can view, enter and manage assignments and needs in real time. This puts employees, equipment and material resources in the right place at the right time, reducing inefficiencies and downtime.

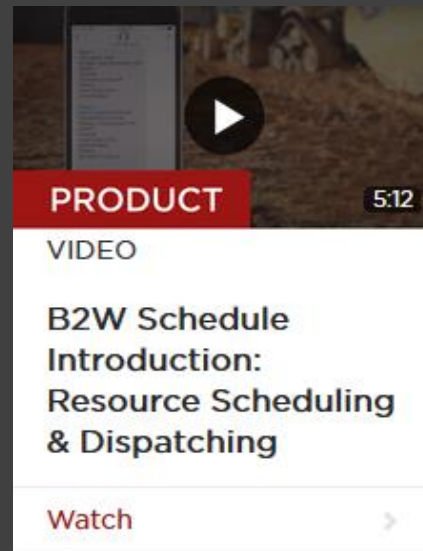

Intuitive, multi-day interface for scheduling and dispatching

B2W Schedule provides a day-by-day view of resource assignments, resource needs, equipment needs, and material orders. Assigning or re-assigning employees, crews and equipment to job sites or fleets is done with drag-and-drop simplicity, and assignments can be planned as far out into the future as needed.

Unlimited, customizable views

B2W Schedule users can enjoy multiple views and groupings to customize how they view the schedule according to their specific roles and requirements, and the same views are accessible on a desktop or mobile device. An unlimited number of these user-defined views can be stored, and security restrictions can be set up to determine which views can be seen by which employees.
