

Insta Key Vault

Manage your keys and
secrets to protect your data

Insta Key Vault

Security – Usability – Compliance

CONTROL AND VISIBILITY

Insta Key Vault unifies key management across multi-cloud and on-prem infrastructure, providing easy control and maximum visibility into your key management operations. The secrets are stored using Hardware Security Module (HSM)-backed protection without traditional HSM complexity. Insta Key Vault helps you to meet compliance requirements like GDPR, DORA or other industry regulations.

REST API integration for services and a centralized web-based UI for management, including enterprise level access controls and Single Sign-On support enable quick and easy deployment with the help of Insta's specialists.

BEST PRACTICES AND SCALABILITY

With Insta Key Vault you can deploy and operate central key management according to best practices. Highly customizable service offering matches our customers' needs with scalability. The flexible pricing allows a cost-effective solution ranging from single use case to full enterprise key management solution.

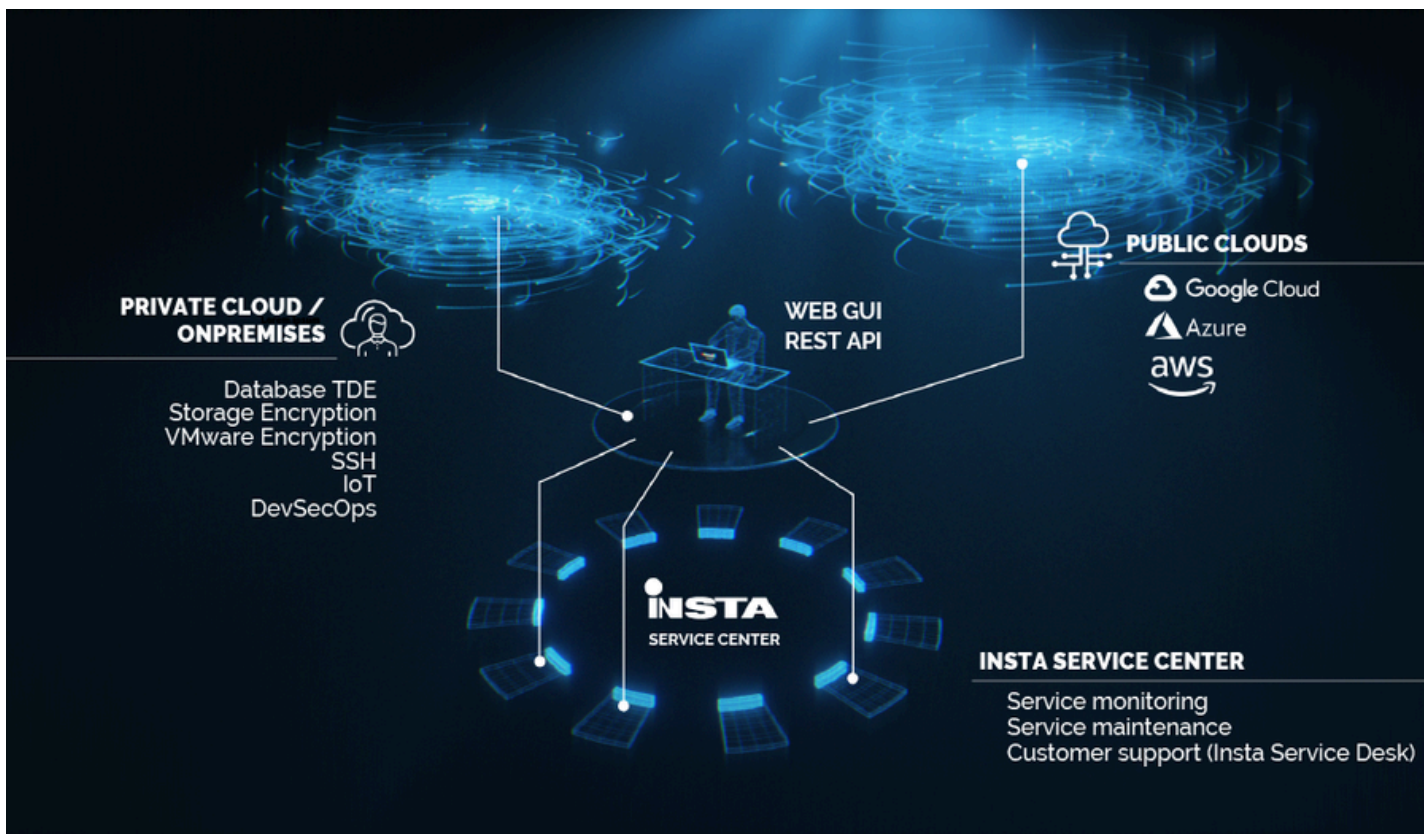

While Insta Key Vault is offered as SaaS model, we are ready to help you to build a dedicated key management infrastructure as well.

CERTIFIED SECURITY AND AVAILABILITY

Service provided from high assurance ISO/IEC 27001 audited and WebTrust certified Insta Service Center. Service administration, monitoring, support and maintenance are ready to help you 24/7.

BEST SECURITY SPECIALISTS AT YOUR SERVICE

We have more than 30 years of experience in PKI, certificates, keys and HSM's. Our partnerships include high-secure-profile customers e.g., critical infrastructure, public safety organization, banking and government. We will offer highest possible security in an easy and cost-effective way.

Control your keys and data in multicloud and hybrid environments

Suitable for on-premises and major cloud environments (AWS, Azure, GCP, OCI)

- BYOK/HYOK and Double-key Encryption for cloud solutions help you to gain sovereignty to your data
- Example use cases include VMware encryption, transparent database encryption, tokenization and secure API key storage

Store your key material in Finland

- All key material in the service is stored in Finland
- Service operated by audited Finnish personnel

Offers visibility to your keys & secrets: who has access to keys, when they are used & rotated

- Limit 3rd party access and force them to handle key material properly
- Force key policy to prevent usage of weak keys
- Force and/or automate key and secrets rotation
- Know what kind of keys are used to help you to migrate to post-quantum algorithms
- Includes full audit log for entire key/secret lifecycle
