Everything Included in Vibe AI

This platform is designed as a full platform-building system, not just a creation tool. It combines infrastructure, monetization, user management, and AI generation into a single environment, so you can launch, control, and scale your own platform from a single dashboard.

In addition, the product also comes with these amazing bonuses for people who purchase early:

Navigating the Vibe AI Interface

As soon as you log in, you'll land on the main dashboard where you can create new projects, access your existing builds, and manage [everything](#) from one central workspace.

Once inside the setup screen, you can define your platform identity by entering a title, connecting your custom domain, and uploading your logo to fully brand your AI platform.

When your setup is complete, your project will appear in the **“My Project”** section, where you can [access](#) it anytime and use the preview link to view your live platform instantly.

The best part is you can set your own pricing plan however you want inside **“Pricing Plan”**.

Then **“Add New Plan”**

Here you can create your pricing plan by setting your plan name, defining [monthly](#) or yearly pricing, adding a description, and selecting the features it includes.

Afterward, you can add your own payment method through **“Payment Gateway”**:

In this step, you can connect your payment system by choosing a gateway like PayPal or Stripe and entering your business email to start receiving payments directly into your account.

When you want to create a new project, just head over to **“My Projects”** and press **“Create New Project”**:

Now you can either enter your own prompt to create exactly what you want or choose from ready-made prompts to quickly generate websites, apps, or funnels in just a few clicks.

This is where you bring your ideas to life by typing your instructions, while the AI builds everything for you in real time with a live preview so you can see and refine your project instantly.

After completing your order, please send your **“receipt ID”** to admin@myblogguides.com via email. Once I receive your message and confirm your purchase, you will receive **all of my exclusive bonuses**. Make sure to email me to verify that you have completed the process. Your bonuses will be delivered **within 12 hours**.

Why Vibe AI Can Be a Different Kind of Asset

With most AI tools, the value you get depends on how much you use them. If you stop creating, the output stops as well. Here, the value is less tied to constant activity and more tied to what you set up from the beginning.

For example, once a platform is created and running, it can continue to be used by others without you needing to rebuild everything each time. The output is not just a single project but an environment in which multiple projects can be created repeatedly.

From a user's perspective, this matches what people are already willing to pay for. They are not necessarily looking for ownership of tools; they are looking for access to something that helps them create quickly and without effort. That expectation is already established in the market.

Because of that, the opportunity becomes more practical. Instead of trying to sell individual services or products, you are better positioned to offer access to a system people can keep using. This makes it easier to think in terms of ongoing usage rather than one-time results.

In that sense, **Vibe AI** is less about doing more work and more about setting up something that can continue to be used over time. The focus shifts from constant creation to building something that holds value beyond a single output.

Here is the clear differences when you use Vibe AI compared to the traditional ways:

Don't just take my words. See how real customers think about the platform:
